

Clinical Trial Protocol

Iranian Registry of Clinical Trials

11 Sep 2026

The role of the repetitive transcranial stimulation as an adjuvant therapy in Bell's palsy.

Protocol summary

Summary

In this double-blind, clinical trial, the aim of this study is evaluation of the role of the repetitive transcranial stimulation as an adjuvant therapy in Bell's palsy. Inclusion criteria: The patients with unilateral Bell' palsy; aged between 18 to 72 years. Exclusion criteria: The patients who have severe complications; patients who do not follow up. The sample size in this study is 46, patients will be allocate randomly in two parallel groups. The randomization is do with randomization software and also in this study doctors are blinded about groups. The intervention group are treated with exercise physiotherapy and repetitive transcranial stimulation for 3 seasons/ week, and the placebo group are treated with exercise physiotherapy for 3 seasons/ weeks, the length course of treatment is 2 weeks in both groups. After treatment duration, the recovery rate of patients in the two groups is assessed using facial disability index.
