Comparison of Aloe vera mouthwash and Placebo on postoperative complications in patients with bilateral impacted mandibular third molar teeth

Protocol summary

Summary

A randomized double-blind clinical trial study to comparison of Aloe vera mouthwash and Placebo on postoperative complications after third molar surgery will do. The inclusion criteria for this study included: bilateral symmetrically impacted partially erupted mandibular third molar teeth. Patients will exclude from the study if they had a history of systemic disease; drug abuse; smoking and pregnant or lactating patients. 25 patients undergoing surgical removal of bilateral and symmetrically placed impacted lower third molars will enroll in the study. The minimum interval between the first and the second surgeries will be 2 weeks. 100% pure Aloe Vera Mouthwash with a similar color and taste of normal saline as placebo , is produced (Barij Essence Company, Iran) and The patients will ask to rinse the mouth with 15 ml of mouthwash for 30 seconds, 4 times a day. A single examiner performing all clinical measurements (swelling, pain, trismus , and alveolar osteitis) prior to surgery and 1 , 3 , 5 and 7 days postoperatively .To evaluate the swelling, distance between the angle of the mandible and the following facial regions is obtain: the tragus, the labial commissure, the nasal border, laterally to the external corner of the eye, and on the soft pogonion. Pain will evaluate using a 10 cm visual analogue scale (VAS). Trismus is evaluating by measuring the distance between the incisal edges of the upper and lower central incisors. The presence of alveolar osteitis (Dry socket) will assess clinically using criteria set out by Blum.

Health conditions studied**1****Description of health condition studied**

Embedded and impacted teeth

ICD-10 code

K01

ICD-10 code description

Embedded and impacted teeth

Primary outcomes**1****Description**

Swelling

Timepoint

Prior to surgery and 1 , 3 , 5 and 7 days postoperatively

Method of measurement

In millimeter. distance between the angle of the mandible and the following facial regions was obtain: thetragus, the labial commissure, the nasal border, laterally to the external corner of the eye, and on the soft pogonion

2**Description**

Pain

Timepoint

Prior to surgery and 1 , 3 , 5 and 7 days postoperatively

Method of measurement

In number 0 to 10 by postoperatively using a visual analogue scale

3**Description**

Trismus

Timepoint

Prior to surgery and 1 , 3 , 5 and 7 days postoperatively

Method of measurement

In millimeter by measuring the distance between the incisal edges of the upper and lower central incisors

4**Description**

Alveolar osteitis

Timepoint

Prior to surgery and 1 , 3 , 5 and 7 days postoperatively

Method of measurement

The presence or absence that will assess clinically using criteria set out by Blum.

Secondary outcomes

empty

Intervention groups**1****Description**

100% pure Aloe Vera Mouthwash The patients will ask to rinse the mouth with 15 ml of mouthwash for 30 seconds, 4 times a day.
