Iranian Registry of Clinical Trials

10 Jun 2026

The Comparison between the effect of preemptive Gabapentin and Fascia Iliaca block in reduction of postoperative pain of femoral shaft surgery

Protocol summary

najafianaraki@bpums.ac.ir

Summary

All patient who accept to participate in the study divided to two equals group randomly(n=30). In case group all patient recieve fascia illica block with 20 CC bupivacainene 0.5%(100 mg.fascia iliaca block is an injection under the inguinal region (femoral or fascia iliaca block); while doing, fascia iliaca block anaesthetic solution is distributed to the femoral nerve, lateral femoral cutaneous nerve and occasionally to the genito-femoral nerve and this made patient painless for a long time. In control group all patient recieve 600 mg of gabapentin 2 hours before surgery. Post operative pain score,first demand of analgesic and total amount of analgesic in first 24 hours will be noted and recorded.

Scientific title

The Comparison between the effect of preemptive Gabapentin and Fascia Iliaca block in reduction of postoperative pain of femoral shaft surgery

Public title

The Comparison between the effect of preemptive Gabapentin and Fascia Iliaca block in reduction of postoperative pain of femoral shaft surgery

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criterion: all patients with femoral shaft fracture between 18 till 45 years old who sign consent form.

Exclusin criteria: sensitivity to gabapentin; local anesthetic; history of opioid abuser; peripheral neuropathy; asthma; diabetes mellitus and use of analgesic 8 hours before surgery.

Age

From **18 years** old to **45 years** old

Gender

Both

Phase

2

First 24 hours

Method of measurement

Patients medical records

Intervention groups

1

Description

In control group all the patients receive 600 mg Gabapentin orally 2 hours before surgery. Gabapentin is a gaba amino buteric acid inhibitor and can prevent post operative pain

Category

Treatment - Drugs

2

Description

In experimental group all the patient receive fascia illica block just before surgery with 20 milliliter bupivacaine .05% fascia iliaca block is an injection under the inguinal region (femoral or fascia iliaca block), When you do fascia iliaca block anaesthetic solution is distributed to the femoral nerve, lateral femoral cutaneous nerve and occasionally to the genito-femoral nerve and this made patient painless for a long time
