The effect of eight weeks elastic bands resistance training along with green coffee supplementation on lipid profiles and atherogenic index of plasma in obese women

Protocol summary

Summary

The main purpose of this study is to investigate the effect of eight weeks elastic bands resistance training along with green coffee supplementation on lipid profiles and atherogenic index of plasma in obese women. Design and method of study: This study is an interventional and single blind research (related to the subjects of the study). 88 overweight female (aged 30-50 years, body mass index >30 kg/m²) are selected and randomly (based on random numbers table) will be divided into four groups of 22 participants: green coffee (GC), resistance band training with green coffee (RBT+GC), resistance band training (RBT) and control (C) groups. Subjects in green coffee supplementation group receive 400 mg capsules containing green coffee extract daily for 8 weeks. Elastic band training will be performed three sessions a week in an eight week period. The ten different exercises, three set for each exercise done. Inclusion criteria: female; age between 30 to 50 years old; obesity (BMI>30); green coffee insensitivity; the level of physical and mental health. Exclusion criteria: history of cardiovascular diseases; cancer; diabetes; kidney and liver disease; weight-loss dietary adherence; weight changes over 5 kg in the last three months; irregular menstrual cycle. Primary outcome: the lipid profiles and atherogenic index will be evaluated 24 hours before and 48 hours after training program.

Health conditions studied

1

Description of health condition studied

Obesity

ICD-10 code

E66.0

ICD-10 code description

Obesity due to excess calories

Primary outcomes

1

Description

Lipid profiles (TG, TC, HDL-C and LDL-C)

Timepoint

Before and after 8 weeks of intervention

Method of measurement

Blood samples

2

Description

Atherogenic Index (AIP)

Timepoint

Before and after 8 weeks of intervention

Method of measurement

the logarithmic equation of TG to HDL-C ratio

Secondary outcomes

1

Description

Body fat percent

Timepoint

Before and after 8 weeks of intervention

Method of measurement

Use the Harpenden model calipers

2

Description

Body Mass Index (BMI)

Timepoint

Before and after 8 weeks of intervention

Method of measurement

Weight divided by height squared

3

Description

Weight

Timepoint

Before and after 8 weeks of intervention

Method of measurement

Weight meter

Intervention groups

1

Description

Intervention group 1: Subjects in green coffee supplementation group receive 400 mg capsules containing green coffee extract daily for 8 weeks.

Category

2**Description**

Intervention group 2: Resistance band training with green coffee group, Subjects in this group in addition to received 400 mg capsules containing green coffee extract daily, elastic band training will be performed three sessions a week in an eight week period.

Category

Other

3**Description**

Intervention group 3: Resistance band training group, in this group will be performed elastic band training three sessions a week in eight week. In each session of Resistance band training are performed 10 exercises in 3 cycles for each exercise.

Category

Other

4**Description**

Control group: The control group consume one daily capsule containing roasted wheat flour with the same appearance as the original supplement (as placebo).

Category

Placebo
