Effect of lemon balm, valerian and valerian/lemon balm on menopause women, sleep disorder in clients visited in health care clinics of Tehran university of Medical Science (2010)

Protocol summary

Summary

The objective of the study is to assess the effect of valerian root extract, lemon balm and combination of valerian/lemon balm on sleep disturbances in menopausal women referred to selected health centers affiliated to Tehran University of Medical Sciences. More than 400 volunteered menopausal women will be interviewed using Pittsburg Sleep Quality Index Questionnaire (PSQI). A total of 200 women of those who scored 5 or more will be invited to participate in the study and sign a written informed consent form. The participants will be randomly assigned into three intervention groups and a control group. The participants in the intervention groups will receive Sedamin, 530 mg capsule, Lemon Balm, 250 mg capsule, or Noragol (160 mg valerian and 80 mg lemon balm), twice daily for a month and those who are in the control group will receive placebo capsule, at the same dose as the intervention groups. Pittsburg Sleep Quality Index questionnaire score will be measured and compared for all participants before and one month after the intervention.
