Effect of kinesiotaping and stretching exercise on shoulder positional parameter female subject with rounded shoulder posture

Protocol summary

Summary

The purpose of the study is to determine the effect of kinesiotaping and pectoralis minor stretching exercise on forward shoulder angle in female subjects with rounded shoulder posture. Method: Twenty female students aged between 18 to 25 years old with rounded shoulder posture participate in this study. To determine the amount of rounded shoulder posture, forward shoulder angle is measured after digital photography. Subjects with forward shoulder angle equal or greater than 52 degrees consider to have rounded shoulder posture. Then, the subjects are assigned to two groups randomly: the stretch group and the stretch plus kinesiotape group. Both groups are trained for doing home exercise to stretch Pectoralis minor bilaterally for two weeks. Kinesiotape group is received kinesiotape on scapular area additionally. Forward shoulder angle is measured in four sessions including pre-intervention (first session), immediately after the first intervention (second session), fourth day (third session) and at the end of two weeks (fourth session).

Scientific title

Effect of kinesiotaping and stretching exercise on shoulder positional parameter female subject with rounded shoulder posture

Public title

Effect of kinesiotaping and stretching exercise on shoulder positional parameter in female subject with rounded shoulder posture

Purpose

Treatment

Inclusion/Exclusion criteria

inclusion criteria: age between 18-30 years; female; rounded shoulder posture(forward shoulder angle equal or more than 52 degree); pectoralis minor shortness; body mass index equal or less than 24/9 Kg/m2; scapular

retractor strength equal or more than 3 in manual muscle testing exclusion criteria: skin abnormal reaction to kinesiotape; history of surgery or trauma in shoulder, cervicothoracic and temporomandibular; pain in shoulder, cervical and thoracic region; structural postural abnormality like scoliosis

Age

From **17 years** old to **30 years** old

Gender

Female

Health conditions studied

1

Description of health condition studied

rounded shoulder posture

ICD-10 code

R29.8, R29.

ICD-10 code description

abnormal posture, other and unspecified symptoms and

signs involving the nervous and musculoskeletal systems

Primary outcomes

1

Description

forward shoulder angle

Timepoint

preintervention- immediately after first intervention- fourth day-end of intervention

Method of measurement

Forward shoulder angle measurement by using MB-ruler after digital photography by degree scale

Secondary outcomes

empty

Intervention groups

1

Description

control group: pectoralis minor stretching exercise, two weeks, daily with 3 repetition, 30 second holding

Category

Rehabilitation

2

Description

intervention group: scapular kinesiotaping and pectoralis minor stretching exercise. kinesiotape replace five times in two weeks. stretching exercise should be done daily, with 3 repetition and 30 second holding

Category

Rehabilitation
