Effects of galvanic vestibular stimulation and cervical proprioception training on postural control behavior in chronic neck pain

Protocol summary

2016-09-26, 1395/07/05

Summary

The aim of this study is to determine the effects of galvanic vestibular stimulation and cervical proprioception training on postural control behavior in chronic neck pain. inclusion criteria for patient group: complaint of neck pain for 3 months or more; no history of head and neck trauma; without referral to upper limb; with a neck disability index score greater than 10%, Visual analogue scale more than 3. Exclusion criteria : Neurological disorders; cervical spine root compression; radiculopathy; preexisting vestibular pathology; connective tissue disease; cervical fracture and dislocation; Ankylosing spondylitis; myelopathy; cervical spine surgery. this study is a randomized controlled clinical trial. 48 patients with nontraumatic neck pain, age between 20 - 50 will participate in this study. Patients will divide in 4 groups of 12 subjects. 12 healthy subjects will participate in study. Galvanic vestibular stimulation will perform 3 times a week for 6 weeks. Cervical proprioception training twice daily will perform for 6 weeks. pressure pain threshold, joint position sense, pain intensity, speed of cop, mean and maximum excursion of center of pressure, rambling , trembling of Center of pressure, frequency component of center of pressure signal will measure before and after of interventions.

Health conditions studied

1

Description of health condition studied

Chronic neck pain

ICD-10 code

M99

ICD-10 code description

Biomechanical lesions, not elsewhere classified

Primary outcomes

1

Description

mean excursion of COP

Timepoint

Before ,immediate after and 6weeks after intervention

Method of measurement

Force plate

2

Description

maximum excursion of COP

Timepoint

Before ,immediate after and 6weeks after intervention

Method of measurement

Force plate

3

Description

Mean speed of COP

Timepoint

Before ,immediate after and 6weeks after intervention

Method of measurement

Force plate

4

Description

Rambling

Timepoint

Before ,immediate after and 6weeks after intervention

Method of measurement

Force plate

5

Description

Trembling

Timepoint

Before ,immediate after and 6weeks after intervention

Method of measurement

Force plate

6

Description

Frequency band of COP

Timepoint

Before ,immediate after and 6weeks after intervention

Method of measurement

Force plate

Secondary outcomes

1

Description

Pain intensity

Timepoint

Before, immediate after and 6 weeks after intervention

Method of measurement

VAS

2

Description

Pressure pain threshold

Timepoint

Before, immediate after and 6 weeks after intervention

Method of measurement

Algometer

3

Description

Joint position sense

Timepoint

Before, immediate after and 6 weeks after intervention

Method of measurement

Laser pointer and distance to reference point during cervical rotation and extension

4

Description

Neck disability level

Timepoint

Before and 6 weeks after intervention

Method of measurement

Neck disability Index

5

Description

Quality of life

Timepoint

Before and 6 weeks after intervention

Method of measurement

Short form12 questionnaire

Intervention groups

1

Description

Galvanic vestibular stimulation will perform3 times a week for 6 weeks.

Category

Rehabilitation

2

Description

cervical proprioception training twice daily will perform for 6 weeks.

Category

Rehabilitation

3

Description

TENS will perform3 times a week for 6 weeks.

Category

Rehabilitation

4

Description

Galvanic vestibular stimulation will perform3 times a week for 6 weeks and cervical proprioception training twice daily will perform for 6 weeks.
