Iranian Registry of Clinical Trials

25 Aug 2026

The effect of Logo therapy on the rate of depression and hope for prisoner women

Protocol summary

2018-02-27, 1396/12/08

Study aim

Determining the effect of the Logo therapy on depression and hope of female prisoners

Design

In this research, 90 inmate women with symptoms of depression and prison conditions, Association were chosen purposefully and were randomly divided into two groups of control and intervention. Group allocation was concealed by assigning a unique code to each participants.

Settings and conduct

The venue for training sessions is for women prisoners. Which will be held in groups.

Participants/Inclusion and exclusion criteria

Entry criterion (female prisoners with symptoms of depression and frustration) Exit criteria (presence of psychotic symptoms and reluctance to participate in the study)

Intervention groups

The intervention group (the intervention group participates in 10 sessions of therapeutic intervention, each session being 90 minutes long) Control group (do not receive any intervention)

Main outcome variables

Improve symptoms of depression; increase hope

Sample size

Target sample size: **90**

Actual sample size reached: **90**

Randomization (investigator's opinion)

Randomized

Randomization description

A two-digit code is allocated to each participant who has the criteria for entering the study. The codes are entered into the system of numbered finishes. Then the first row or the first column of sampling will begin. Among the two-digit codes that are smaller than the highest number of participants, 90 will be selected. Then again, 90 randomly selected individuals will be randomly assigned to the intervention and control groups using the random numbers table. Thus, the pair numbers in the intervention group and the individual numbers in the control group will be placed
