Effects of Aerobic Exercise on Hematologic Indices of Women with Rheumatoid Arthritis

Protocol summary

Summary

The aim of the current study is to investigate the effects of 8 weeks aerobic exercise on the some hematologic factors of patients with RA. Design: In this clinical trial study, 33 women with RA participated voluntarily in this study. All the participants were randomly assigned to two study groups, control (17) and training (16) that using a computer-based random digit generator using the admission numbers. Those who were assigned to the training group were placed in a training program including aerobic cycling which was done on the stationary bike, 3 sessions per week with intensity about 65% of reserved heart rate for 8 weeks. The participants used the same pharmacological treatments. The hemoglobin (Hb), hematocrit and RBC count was measured with standard methods before and after the intervention in all the subjects and compared.

Scientific title

Effects of Aerobic Exercise on Hematologic Indices of Women with Rheumatoid Arthritis

Public title

Effects of Aerobic Exercise on Hematologic Indices of Women with Rheumatoid Arthritis

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: All patients who had diagnosis of RA with involving their lower limbs; had not participated in any activities at least in the last three years; They should be able to do exercise protocols of this study. Exclusion criteria: Individuals had any known heart diseases; renal; pulmonary or liver disorders; diabet and duodenal ulcer; Also if they had self-medication; didn't have any leaning to continue the study.

Age

From **18 years** old to **70 years** old

Health conditions studied

1

Description of health condition studied

Rheumatoid arthritis

ICD-10 code

M05.3

ICD-10 code description

Rheumatoid arthritis with involvement of other organs
and systems

Primary outcomes

1

Description

Hematologic Indices

Timepoint

two days before and after the training period in a fasting

status

Method of measurement

Blood cell differential count, Counter XL22

Secondary outcomes

1

Description

Quality of life

Timepoint

Before the intervention and 2 months after the
intervention.

Method of measurement

Questionnaires

Intervention groups

1

Description

Control group: patients in control group used only
pharmacological treatments (methotrexate 7.5 mg per
week and prednisolone 5 mg per day). They didn't
participate in any exercise programs.

Category

Treatment - Drugs

2

Description

Intervention group: patients in training group, in addition
to use methotrexate 7.5 mg per week and prednisolone
5 mg per day, they participated in an aerobic cycling
exercise which was done on the stationary bike, 3
sessions per week for 8 weeks that based on the
principles of exercise science, under the supervision of a
sport medicine and consulting with the treating
physician.
