

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

The comparison effects of positional release and Active release techniques on latent trigger point in upper trapezius muscle in patient.

Protocol summary

Summary

The aim of the present study was to evaluate the effectiveness of Positional Release Therapy and Active Release Therapy on Pain intensity, Pain Pressure Threshold & Countralateral Side Flexion Cervical Range of Motion in Computer User Via Latent Myofascial Trigger Point .Fourty two volunteers from Shahid Beheshti University Medical Science In Iran, with Latent Trigger Point of Upper Trapezius Muscle ,aged 19-45 years old, were participated in this study. All individuals were randomly classified into three groups. Group (A): Positional Release Technique, Group (B): Active Release Technique and Group (C) : Control with sham treatment. treatment consisted of 3 sessions of ART ,PRT& Control , applied to the over a duration of 1 weeks. The local pain intensity via visual analogous scale (VAS) and Pain pressure threshold (PPT) with algometry , Active Cervical Countralateral Flexion range of motion(CLR0M) with goniometry were measured before therapy and 5min after per therapy session and also outcome measures were evaluated and recorded one week after third session as a follow up.

Scientific title

The comparison effects of positional release and Active release techniques on latent trigger point in upper trapezius muscle in patient.

Public title

The effects of manual therapies on latent trigger point in upper trapezius muscle

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:were presence of tender spot within

taut band in the upper trapezius muscle which was painful in response to 25 Newton (N) pressures on it;19-45 years of age;pain intensity of at least 3 on a visual analogue scale (VAS);decreased cervical lateral flexion to the opposite side of the latent trigger point .
Exclusion criteria: History of a whiplash injury;history of cervical spine surgery;diagnosis of cervical radiculopathy ;having undergone myofascial pain therapy in the past month before the study.

Age

From **19 years** old to **45 years** old

Gender

Female

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **42**

Health conditions studied

1

Description of health condition studied

Myofascial trigger point

ICD-10 code

M62.9

ICD-10 code description

Disorder of muscle, unspecified

Primary outcomes

1

Description

Cervical Contralateral range of motion(CROM)

Timepoint

Before pre treatment,After 1,2,3 session,After follow up

Method of measurement

CROM via Goniometer(degree)

2

Description

Pain pressure threshold (PPT)

Timepoint

Before pre treatment,After 1,2,3 session, After follow up

Method of measurement

PPT via algometry(kilogram / (cm)2)

3

Description

Pain intensity visual analogous scale (VAS)

Timepoint

Before pre treatment,After 1,2,3 session, After follow up

Method of measurement

VAS via 10 centimeter line that patients shows her/his pain intensity with numerical

Secondary outcomes

empty

Intervention groups

1

Description

Positional release technique :In this group patients treat with Positional release technique on trigger point of Upper trapezius muscle with 3 sessions therapy in during one week.

Category

Treatment - Other

2

Description

Active release therapy: In this group patients treat with Active release therapy on trigger point of Upper trapezius muscle with three sessions therapy induring one week. interval

Category

Treatment - Other

3

Description

Control: in this group patients treat an algometer (model 5020) with out any hand pressure on trigger point of Upper trapezius muscle e with three sessions therapy induring one week.

Category

Treatment - Other
