

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

The effect of routine physiotherapy with and without stabilization exercise on pain, functional disability, neck range of motion and dimensions of the cervical multifidus and longus colli muscles in patients with unilateral chronic cervical radiculopathy:

Protocol summary

Registration timing: **retrospective**

Study aim

Effect of routine physiotherapy treatment with and without stabilization exercise

Last update: **2017-12-27, 1396/10/06**

Update count: **0**

Design

50 patients with unilateral cervical radiculopathy

Registration date

2017-12-27, 1396/10/06

Settings and conduct

Hospitals of the University of Social Welfare and Rehabilitation Performing therapeutic interventions and comparing their effect

Participants/Inclusion and exclusion criteria

Patients with unilateral chronic radicular neck pain of both males and females aged 25-60 years with involvement in lower cervical vertebrae Patients with unilateral chronic radicular neck pain, which the physician approved was diagnosed by clinical examinations, MRI imaging and electrodiogenesis tests. Patients with unilateral chronic radiculopathy who had symptoms for at least 3 months. Incidence of symptoms in the neck and arm areas include: pain intensification with neck movements, sensory changes, motor weakness, reduction of deep tendon reflexes

Recruitment status

Recruitment complete

Funding source

University of Social Welfare and Rehabilitation Sciences

Intervention groups

The experimental group received a routine physical and neck stabilization exercises Control group received routine physiotherapy

Expected recruitment start date

2016-06-21, 1395/04/01

Expected recruitment end date

2017-06-20, 1396/03/30

Main outcome variables

Pain intensity; Neck disability index; Range of motion; Deep cervical muscles dimensions

Actual recruitment start date

empty

Actual recruitment end date

empty

Trial completion date

empty

Scientific title

The effect of routine physiotherapy with and without stabilization exercise on pain, functional disability, neck range of motion and dimensions of the cervical multifidus and longus colli muscles in patients with unilateral

chronic cervical radiculopathy:

Public title

physical therapy treatment of cervical radiculopathy patients

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

1) patients with unilateral chronic cervical radiculopathy, both male and female, age between 25-60 years old, with involvement in lower cervical vertebrae. 2) Patients with unilateral chronic radicular neck pain, that physician have confirmed this disorder by clinical examination, MRI imaging and electrodiagnostic tests. 3) patients with unilateral chronic radicular neck pain that they have been at least 3 months of the onset of symptoms. 4) the intensity of pain in the neck and arm regions is between 3 to 7 of visual analogue scale pain score, and with at least one of the following; pain aggravated by neck movements, changes in sensory, motor weakness, loss of deep tendon reflexes. 5) patients who have a desire to participate in the study.

Exclusion criteria:

1) chronic non-specific neck pain and Whiplash. 2) bilateral cervical radiculopathy. 3) previous surgery of cervical or thoracic spine. 4) patients with myelopathy, peripheral neuropathy, damage to the shoulder joint and Thoracic Outlet Syndrome. 5) evidence of involvement of the central nervous system such as Hoffman sign, Babinski, clonus. 6) pain in the neck region due to arthritis, cancer and immune system such as rheumatoid arthritis. 7) presence of congenital abnormalities in the spine known as scoliosis, torticollis in childhood. 8) postural abnormalities of spine such as Forward Head Posture, hyperkyphosis. 9) Compression fracture caused by osteoporosis, stenosis and spondylolysis or spondylolisthesis. 10) having systemic diseases or general health problems such as pulmonary diseases, myopathy, fibromyalgia, cancer, spinal tuberculosis. 11) wounds in neck region. 12) primarily temporomandibular disorders. 13) visual and hearing impairments. 14) Pregnancy. 15) specific treatment for neck and shoulder during the last 3 months.

Title and more details about the data/document

Some of the data, such as information on the main outcome or the like, can be shared.

When the data will become available and for how long

Start the access period 6 months after printing the results

To whom data/document is available

Only for researchers working in academic and scientific institutions

Under which criteria data/document could be used

What kind of analysis is allowed on the delivered data, whether the use of the documentation is allowed or what other mechanisms will govern it.

From where data/document is obtainable

Email along with the names and addresses of individuals

What processes are involved for a request to access data/document

According to working conditions about two months
