Effectiveness of Aerobic Exercise on Promotion of Cognitive - Executive Functions in Patient with Schizophrenia Spectrum

Protocol summary

Summary

The present research was aimed to investigate the effectiveness of aerobic exercise on promotion of executive- cognitive functions in patients with schizophrenia spectrum. Statistical population was patients with schizophrenia that was admitted in rehabilitation centers in Ardabil. Darolshafa center were selected by random cluster sampling. The statistical sample was include 24 patients with disorder of schizophrenia that were selected by random sampling. Patients were divided in to experimental group and control group. Inclusion criteria: Insert a definitive diagnosis of schizophrenia in patient records; Having at least a primary education. Exclusion criteria: having Cognitive disorders such as delirium and dementia; chronic physical illness; Physical and motor limitations. Subjects were assessed with wisconsin card sorting test (WCST), Wechsler Memory scale and Stroop test in two stages (pre test and post test). The experimental group participated 3 sessions per week for 4 weeks and 45 minute aerobic exercise training (including steps: 1. warm up the body 2. aerobic exercise is brisk walking and continuous 3. Do gentle exercises, stretching and stretching arms and legs 4. To return to the original state). control group received no intervention. Aerobic exercise training is an independent variable and executive-cognitive functions are dependent variables.
