A comparison study on the Immediate Effects of Dry Needling and Static Stretching on Hamstring Flexibility in Healthy Subjects with shortness of hamstring.

Protocol summary

Summary

Purpose of this study: A comparison study on the immediate effects of dry needling and static stretching on hamstring flexibility in healthy subjects with shortness of hamstring. Study design was randomized control trial. Participants recruited from the students of rehabilitation school of Tehran University of Medical Sciences. All participants signed an informed consent form prior to entrance in the study. And then 40 participants were assigned to either static stretch (20 subjects, 4=male and 16=female) or dry needling (20 subjects, 4=male and 16=female) through a random selection, which in turn was based on sortition. Outcome measurements included flexibility, passive compliance, passive peak torque and stretch tolerance before, immediately after and 15 minutes after intervention were measured. Inclusion criteria: Hamstring shortness $\geq 20^\circ$ using the Active Knee Extension Test (AKET), ages between 18-40 years, no history of orthopedic/neurological disorders in the lower extremity, no history of low back pain for the last year. Exclusion criteria: Fear of needling, and not consenting to participate in this study. Interventions include: dry needling and static stretching of hamstring muscles. Outcome measurements of this study were flexibility, passive compliance, passive peak torque and stretch tolerance

Scientific title

A comparison study on the Immediate Effects of Dry Needling and Static Stretching on Hamstring Flexibility in Healthy Subjects with shortness of hamstring.

Public title

A comparison study on effects of dry needling and static

stretching on hamstring flexibility.

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Hamstring shortness $\geq 20^\circ$ using the Active Knee Extension Test (AKET); ages between 18-40 years; no history of orthopedic/neurological disorders in the lower extremity; no history of low back pain for the last year; no contraindication for using dry needling (e.g. pregnancy, diabetes mellitus); no joint limitation in the lower extremities. Exclusion criteria: Fear of needling; not consenting to participate in this study.

Health conditions studied

1

Description of health condition studied

hamstring tightness

ICD-10 code

M62.4

ICD-10 code description

Contracture of muscle

Primary outcomes

1

Description

Flexibility

Timepoint

Before, immediately after and 15 min after intervention

Method of measurement

Goniometer

2

Description

Passive compliance

Timepoint

Before, immediately after and 15 min after intervention

Method of measurement

Goniometer and hand held dynamometer

Secondary outcomes

1

Description

Passive peak torque

Timepoint

Before, immediately after and 15 minutes after intervention

Method of measurement

Hand held dynamometer

2

Description

Stretch tolerance

Timepoint

Before, immediately after and 15 minutes after intervention

Method of measurement

Goniometer

Intervention groups

1

Description

Dry needling includes using of 6 cm needle specified for dry needling. Three point of hamstring muscle will choose for needling. Duration of needling for each point is 1 minute. The needle was deeply inserted perpendicular to the skin using fast-in and fast out cone shape technique.

Category

Treatment - Other

2**Description**

Static stretching includes a slow and passive stretching of hamstring muscles in position of Active Knee Extension test. Investigator ask the subject to endure as much stretching force as possible without pain. Static stretching lasted for 30 seconds. This sequence repeats 3 times with 10-second rest intervals between each trial.
