Effect of Trans- theoretical model-based education on reproductive age women's knowledge, attitude and decision making toward childbearing

Protocol summary

Registration timing: **registered_while_recruiting**

Summary

The general goal of the study is determining the effect of Trans- theoretical model-based education on knowledge, attitude and decision making toward childbearing in reproductive age women who referring to community health centers in Amol city. The specific objectives of this plan are to determine and compare the attitudes, knowledge, decision-making balances, self-efficacy, and stages of behavior change towards childbearing in two groups, the test and control are before and after intervention. The type of this study was experimental, multi-stage sampling method and the selection of samples in each group was random and simple, and the number of samples was 76 in each group (152 in total) which are randomly selected from the two health centers of the urban community of Amol. Inclusion criteria are marriage; fertility; being healthy; aged 18 to 35, exclusion criteria are marital conflicts; Prohibition of childbearing. Training sessions are 5 one-hour sessions and various methods such as lecture with slideshow (with issues of importance and benefits of childbearing, healthy lifestyle before pregnancy, pre-conception counseling, etc.), video, question and answer, small group meetings. Primary outcomes are knowledge and attitude towards childbearing. Secondary outcomes are Structures such as stages of behavior change, self-efficacy and decision-making balance. Independent variable is Trans-theoretical model-based education. Dependent variables are attitude and knowledge about childbearing, self-efficacy, decision-making balance and the stages of behavior change.

Health conditions studied**1****Description of health condition studied**

childbearing

ICD-10 code

-

ICD-10 code description

-

Primary outcomes**1****Description**

childbearing knowledge toward childbearing

Timepoint

Before the intervention, 3 and 6 months after the completion of the educational intervention

Method of measurement

validated Researcher-made questionnaire on childbearing

2**Description**

childbearing attitude toward childbearing

Timepoint

before the intervention, 3 and 6 months after the intervention

Method of measurement

questionnaire

Secondary outcomes**1****Description**

stages of behavior change construct

Timepoint

Before the intervention, 3 and 6 months after the completion of the educational intervention

Method of measurement

Decision-making questionnaire for childbearing based on a trans-theoretical model (Dr. Abolhassan Naghibi)

2**Description**

self efficacy construct

Timepoint

before the intervention, 3 and 6 months after intervention

Method of measurement

decision making about childbearing questionnaire

3

Description

decision making about childbearing construct

Timepoint

before the intervention, 3 and 6 months after intervention

Method of measurement

decision making about childbearing questionnaire

Intervention groups

1

Description

The control group: This group will receive common education for promoting childbearing on the basis of new population policies in accordance with the Ministry of Health's instructions from the relevant center along with the intervention group.

Category

Behavior

2

Description

The intervention group: This group will receive training in accordance with their behavioral stages: 2 sessions of the precontemplation group (with topics: importance of childbearing in sociology, awareness of childbearing and the consequences of delay, discontinuation of contraceptive methods, healthy lifestyle before pregnancy), 2 sessions of the contemplation group (with topics: Interruption of contraceptive methods, healthy lifestyle, preconception counseling), and 1 session of the preparation group (with topics preconception counseling, embryo developmental stages, maternal health and discussion of teratogens, pregnancy symptoms and how to deal with it, importance of embryo screening during pregnancy, proper pregnancy care for childbearing), with various method such as lecture with slide show, question and answer, video, small group meetings. Each session will be 60 minutes long. At the end of each session a pamphlet summarizing its educational materials session will provide. After the completion of the training program, text messages will be provided on a weekly basis. In case of need, the test group can receive telephone or textual advice.
