

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Comparison of two proprioception and core stability training programs in the balance and gait kinematics parameters of deaf students.

Protocol summary

Study aim

The purpose of this study comparison of two proprioception and core stability training programs in the balance and gait kinematics parameters of deaf students

Design

In this study, 30 students who are deaf and criteria of the study, the deaf school in Rasht city elected. The participants were randomly divided into two groups: proprioception (10-person) and core stability (10 members) and a control group (10 people) is divided and each participant is assigned a code.

Settings and conduct

The current study is of clinical trial one aiming to Comparison of two proprioception and core stability training programs in the balance and gait kinematics parameters of deaf students. It will be used the BESS test for static balance, the SLS test for control posture, the Y test (YBT) for dynamic balance, an electrogoniometric device for the proprioception of joints, and a core stability muscle endurance test set; and it will be used to evaluate the gait kinematic parameters from digital cameras and then using Kinava software.

Participants/Inclusion and exclusion criteria

The inclusion criteria: age of 15-18; hearing range of more than 75 db and avoidance of medicines that affect balance during research procedure. The exclusion criteria: avoidance of participating in the relevant sessions and not completing the length of training period; cardiovascular and respiratory disease

Intervention groups

The first experimental group has performed proprioception training (without visual activity), the second experimental group has performed core stabilization training for 8 weeks and the control group did not receive any exercise programs.

Main outcome variables

- Rehabilitation of the Deaf - Improve the balance of the deaf - Improved postural control of the deaf - Improve the deafness of the deaf

Scientific title

Comparison of two proprioception and core stability training programs in the balance and gait kinematics parameters of deaf students.

Public title

The effect of exercise therapy on executive on functions of deaf students

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

The inclination of participation in the research The refraining of tranquilizers or those with effects on balance The Lack of cochlear implantation The hearing range of more than 75 db. Avoidance of exercising or any intense activities during the research No lower limb damage background during the past 6 months or any neural or muscular complexities No eyesight disorder Lack of any status abnormalities effective in the procedure of the research (in the lower and upper limbs) Not surgical background in the past year Not a fracture in the upper and lower limbs a year prior to research Non-insulin-dependent diabetes Boys subjects

Exclusion criteria:

Lack of participation in two sequential practice sessions or in three interrupted practice sessions The advent of Musculoskeletal pain after practice Students suffering from multiple disabilities Students cardiovascular and respiratory diseases Students articular system and orthopedic disorders including neck pain, backache, rheumatoid arthritis or the apparent difference in the length of the limbs

Age

From **15 years** old to **18 years** old

Gender

Male

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: **30**

More than 1 sample in each individual

Number of samples in each individual: **1**

In each person, the tests of balance, postural control and kinematic walking parameters are measured.

Randomization (investigator's opinion)

Randomized

Randomization description

Subjects were divided into experimental and control groups based on Sealed envelopes.

Blinding (investigator's opinion)

Not blinded

Health conditions studied

1

Description of health condition studied

Balance and gait kinematics parameters

ICD-10 code

Z02.5

ICD-10 code description

Encounter for examination for participation in sport

Primary outcomes

1

Description

Balance

Timepoint

Before intervention and 2 months after intervention and 6 months after the post-test.

Method of measurement

BESS Test and Y Test

2

Description

Postural control

Timepoint

Before intervention and 2 months after intervention

Method of measurement

SLS Test

3

Description

Proprioception

Timepoint

Before intervention and 2 months after intervention

Method of measurement

Electrogonometer device

4**Description**

Core stability muscle endurance

Timepoint

Before intervention and 2 months after intervention

Method of measurement

Core stability test set

5**Description**

Gait kinematics parameters

Timepoint

Before intervention and 2 months after intervention

Method of measurement

Digital camera and kinovea software

Secondary outcomes

empty

Intervention groups**1****Description**

The proprioception training group will attend training sessions for 8 weeks (Every week three sessions and each session for 60 minutes) and their status will be evaluated before and two months after the intervention.

Category

Rehabilitation

2**Description**

The core stability training group will attend training sessions for 8 weeks (Every week three sessions and each session for 60 minutes) and their status will be evaluated before and two months after the intervention.

Title and more details about the data/document

The total potential data can be shared after unidentifiable people.

When the data will become available and for how long

Start the access period 6 months after printing the results.

To whom data/document is available

Everyone in the community can use it.

Under which criteria data/document could be used

- For deaf rehabilitation fields. - For trainers and sports science teachers. - in the field of occupational therapy. - In sports fields of the disabled.

From where data/document is obtainable

Applicants may refer to rehabilitation and sports science journals for receiving data.

What processes are involved for a request to access data/document

Extensions can be submitted to the following email address within six months after the results are printed. Email Address: zareei.h@yahoo.com
