Comparison the effect of two methods of warming on the physiological indices during and after laparoscopic abdominal surgery at the Alzahra Hospital of Isfahan in 2017

Protocol summary

Summary

Objective: comparison the effect of two methods of warming on the physiological indices during and after laparoscopic abdominal surgery. Study design: stratified random sampling. Study population: patients with laparoscopic cholecystectomy in Al-Zahra hospital. The main inclusion criteria: no underlying disease and cardiovascular disease; no fever; aged between 18 and 65 years; surgery time up to 2 hours. The main exclusion criteria: need for blood transfusions during and after surgery; intra-abdominal infections; get more than 5 liters of intravenous fluids during surgery. Sample size: 96 patients. Intervention or interventions: the patients to a separate procedure will be warm. Intervention time: immediately after induction of anesthesia, extremities of the patient in the 1 group is heated by the forced air system, warming IV fluids are used for the group 2 until 30 minutes after the end of the surgery. The control group received routine care. Variables before induction of anesthesia, immediately after induction of anesthesia and every 15 minutes until 30 minutes after the end of the surgery will be measured. Intensity of shivering in recovery with an anesthesiologist monitoring and verification by means of observation (Grossley and Mahajan) will be examined. The primary outcome or consequences of the study: changes in physiological parameters and reduce shivering.

Scientific title

Comparison the effect of two methods of warming on the physiological indices during and after laparoscopic abdominal surgery at the Alzahra Hospital of Isfahan in 2017

Public title

Comparison the effect of two methods of warming on the physiological indices during and after laparoscopic abdominal surgery at the Alzahra Hospital of Isfahan in 2017

Purpose

Prevention

Inclusion/Exclusion criteria

The inclusion criteria: satisfaction; no underlying disease (hypothyroidism, hyperthyroidism, diabetes and hypertension) and cardiovascular disease; no fever; aged between 18 and 65 years; surgery time up to 2 hours; no received Corticosteroids and non-steroidal anti-pain; lack of infection; ASA = I - II; BMI = 18.5 - 38. The exclusion criteria: the need for open surgery or return the patient to the operating room; and said heat felt by the patient in recovery; need for blood transfusions during and after surgery; intra-abdominal infections; blood loss during surgery more than 1 liter; Sensitivity to anesthetic drugs; get more than 5 liters of intravenous fluids during surgery; temperature more than 37.5 or less than 36.5 prior to surgery; the need for cardiopulmonary resuscitation during surgery; intraoperative hemodynamic changes include a severe drop in blood pressure and pulse; using humid and warm CO2 gas for pneumoperitoneum.

Health conditions studied

1

Description of health condition studied

hypothermia and Shivering

ICD-10 code

T88.5

ICD-10 code description

Other complications of anaesthesia

Primary outcomes

1

Description

Core body temperature

Timepoint

Before induction of anesthesia, immediately after induction of anesthesia and then every 15 minutes until 30 minutes after the end of surgery.

Method of measurement

Tympanic thermometers

2

Description

blood pressure

Timepoint

Before induction of anesthesia, immediately after induction of anesthesia and then every 15 minutes until 30 minutes after the end of surgery.

Method of measurement

Blood Pressure Monitor (monitoring vital signs)

3

Description

pulse

Timepoint

Before induction of anesthesia, immediately after induction of anesthesia and then every 15 minutes until 30 minutes after the end of surgery.

Method of measurement

Pulse oximetry (monitoring vital signs)

4

Description

respiratory rate

Timepoint

Before induction of anesthesia, immediately after induction of anesthesia and then every 15 minutes until

30 minutes after the end of surgery.

Method of measurement

Counting (monitoring vital signs)

5

Description

oxygen saturation

Timepoint

Before induction of anesthesia, immediately after induction of anesthesia and then every 15 minutes until 30 minutes after the end of surgery.

Method of measurement

Pulse oximetry (monitoring vital signs)

6

Description

Shivering

Timepoint

after surgery

Method of measurement

Visual assessment scale

Secondary outcomes

1

Description

Duration of anesthesia

Timepoint

after surgery

Method of measurement

Since the induction of anesthesia until extubation

2

Description

intravenous fluids

Timepoint

after surgery

Method of measurement

Observation

3

Description

Duration of surgery

Timepoint

after surgery

Method of measurement

from making the surgical incision to skin closure and dressing

4

Description

pneumoperitoneum time

Timepoint

after surgery

Method of measurement

Since the introduction of gas into the abdomen until removing it from the abdomen

5

Description

The volume of carbon dioxide input

Timepoint

after surgery

Method of measurement

Observation

Intervention groups

1

Description

Patients immediately after induction of anesthesia under a forced air system with maximum temperature will be 45 ° C.

Category

Prevention

2

Description

Warming IV fluids (38 ° C) is recommended immediately after induction of anesthesia

Category

Prevention

3

Description

Control group receive routine care.
