Evaluation of induction chemotherapy and Neoadjuvant chemoradiotherapy effect on pathologic complete response in cardia and gastric cancer

Protocol summary

Summary

In western studies, 5 years survival of complete resected stage gastric cancer is approximately 70_75 percent; while for stage II and more, this decreased to less than 35 percent. These findings have led to efforts to improve outcomes in these patients with employing adjuvant or neoadjuvant treatment. Recent studies have demonstrated that induction chemotherapy followed by concurrent Chemoradiotherapy provide constant survival period by significant pathologic response. However, there is no single standard treatment for gastric or cardiac cancer. In this pilot interventional study, 30 new patients with gastric cancer who would be referred to radiotherapy oncology centre in Emam Hossein hospital since 23 August 2017_ 22 September 2018 and have all inclusion criteria of our study will be imported to study. They will receive induction chemotherapy at first (paclitaxel 50 mg/m², carboplatin AUC=2, weekly for 12 courses), then concurrent neoadjuvant chemoradiotherapy (RT/Radiotherapy 45Gy/25 fractions, oxaliplatin 40mg/m² weekly and capecitabine 500mg/m²/BID daily during overall treatment time). After 6_8 weeks they will undergo surgery and the pathologic complete response will be assessed in surgical specimen. Pathologic complete response means no residue of carcinoma in cardia, stomach, esophageal gastric junction and regional lymph nodes. Also we'll consider age, family history of gastrointestinal cancer, tumor distance from incisive teeth by endoscopy, sieve type, TNM staging, tumor histology and grade, surgical margin and pathologic complete response.

Scientific title

Evaluation of induction chemotherapy and Neoadjuvant

chemoradiotherapy effect on pathologic complete response in cardia and gastric cancer

IR.SBMU.MSP.REC.1396.353

Public title

Effect of chemotherapy and chemoradiotherapy on stomach cancer

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: stomach or cardiac cancer; resectable locally advanced Tumor (T3 or T4 with pericardial or pleural or diaphragmatic involvement, or N1 and more); no metastasis; ages 18_75; normal liver and renal function test; performance status (ps) 0_1. Exclusion criteria: T1_2 N0, unresectable tumors (T4b); peritoneal or visceral metastasis; non regional lymph node extension such as paraaortic or mesenteric; age <18 or >75; impaired liver or renal function test and PS 2 and more.

Age

From **18 years** old to **75 years** old

Health conditions studied

1

Description of health condition studied

Gastric and cardiac cancer

ICD-10 code

C16

ICD-10 code description

Malignant neoplasm of stomach

Primary outcomes

1

Description

pathologic complete response

Timepoint

6_8 weeks after completion of them I radiotherapy, in surgical specimen

Method of measurement

microscopic assessment of surgical specimen by pathologist

Secondary outcomes

1

Description

surgical margin

Timepoint

after intervention, in surgical specimen

Method of measurement

microscopic assessment of surgical specimen by pathologist

Intervention groups

1

Description

They will receive induction chemotherapy at first (paclitaxel 50 mg/m², carboplatin AUC=2. weekly for 12 courses), then concurrent neoadjuvant chemoradiotherapy (RT/Radiotherapy 45Gy/25frc, oxaliplatin 40mg/m² weekly and capecitabine 500mg/m²/BID daily during overall treatment time). 6_8 weeks after completion of neoadjuvant treatment they will undergo surgery
