Digital Media-based Health Intervention on the Promotion of Women's Physical Activity: A Quasi-Experimental Study

Protocol summary

Study aim

survey the impact of a digital media-based health intervention on promotion of women's physical activity

Design

In this research, 360 eligible women referring to health centers were chosen purposefully and a code was allocated to each one of them. Then, patients were randomly divided into two control and intervention groups.

Settings and conduct

Its population was women who referred to health centers in Kerman, Iran. At the time of the study, there were 8 active health centers in Kerman, in which 4 were randomly selected as intervention centers and 4 as control ones

Participants/Inclusion and exclusion criteria

having a mobile phone and the ability to use it, access to the internet, ability to use a computer and the internet

Intervention groups

intervention group who revied a digital media-based electronic educational intervention control group who do not receive any intervention

Main outcome variables

Physical Activity
