Comparison of effectiveness of schema therapy with mindfulness and forgiveness therapy on clinical symptoms, emotional responses, cognitive distortions and self-compassion in women affected by husband's betrayal

Protocol summary

Study aim

Studying the effectiveness of schema therapy with mindfulness and forgiveness therapy on clinical symptoms, emotional responses, cognitive distortions and self-compassion in women affected by husband's betrayal

Design

Clinical trial with follow-up and control group, with parallel groups, not blind, randomized

Settings and conduct

The target population of this study is women affected by treachery of spouse referred to psychological clinics of Mashhad during the period from November to December 2018. A total of 36 women are selected based on inclusion criteria by the available sampling method and are randomly assigned to one of the two experimental or control groups. All participants will answer the questionnaire in the pre-test, post-test and 2 months follow-up steps. The data will be analyzed by repeated measures of variance analysis.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Women whose husband's had been cut with the third person, but they could not reconstruct the relationship due to the anger and annoyance of husband's betrayal. Exclusion criteria: To counteract husband's betrayal, Being applicant for divorce, Husband's remarriage due to betrayal

Intervention groups

Intervention group1: During ten 90-minute sessions of schema therapy with mindfulness for 2 month,, three of the most influential schemas and subjectivities of each participants, will be used in the context of the topic of mindfulness. Intervention group 2 : During ten 90-minute sessions of forgiveness therapy for 2 month, the participants will pass the forgiveness process by uncovering of anger, making decision to forgive, working on it and finally deepening the forgiveness. Control

group: Will not receive any intervention until the end of the follow-up step.

Main outcome variables

Clinical symptoms;Emotional responses to betraying;
Cognitive distortions; Self-compassion

Intervention groups

1

Description

Intervention group 1: schema therapy with mindfulness, meetings are taken away from book "Mindfulness and schema therapy, 2014; translated by Zirak and Hamid Pour", In the form of nine weekly 90 minute sessions and two follow-up sessions , monthly and bimonthly . During the training sessions instead of addressing the personality problems of the participants, three number of the most influential schemas and subjectivities of each group member will be known. Then, these schemas and subjectivities are used in the context of the topic of mindfulness during education.

Category

Behavior

2

Description

Intervention group 2: Forgiveness therapy will be done for 10 weekly 90 minute sessions, based on the " Enright and et al (2000)" process model which consists of twenty units in four stages. The purpose of the first stage, detection, is increasing awareness of the client from the psychological factors which are inhibiting the process of recovery and also correction of their worldview to the guilty person, their future and the existential view. In the second stage which called decision making, the goal is to encourage the client to consider forgiveness as an active

response to their self-annoyance and committing to it. The goal of the stage of action which is the third stage of this pattern is to reconstructing the definition of annoyance, empathy with the offending person and acceptance of annoyance. Finally, the goal of the fourth stage which is named result or giving depth , is finding meaning, social support and purpose of life.

Category

Behavior

3

Description

Control group: Which will not receive any intervention until the end of the 2-month follow-up after intervention on the two experimental groups 1 and 2. After the follow-up stage, one of the interventions one or two which had better efficiency will be performed on the control group.
