Comparison of Damask Rose and lidocaine spray on arteriovenous fistula cannulation pain in patients in the hemodialyse ward

Protocol summary

Study aim

Comparison of Damask Rose and lidocaine spray on fistula cannulation pain in the hemodialysis patient

Design

A randomised trial with two groups of intervention and a control group, community-based and pragmatic, with parallel groups

Settings and conduct

This study will be done on hemodialysis patients in hemodialyse ward in Imam Hossein hospital of Malayer. Participants will be randomly divided into three groups and before the cannulation, in the intervention group 1 damask Rose and in group 2 Lidocaine spray will be used. There will be no intervention in the control group. And In all three groups, the severity of pain associated with cannulation will be investigated.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients with the end-stage renal disease, Use fistula to perform hemodialysis. Exclusion criteria: Sensitivity to topical anesthetic and herbal allergens, Dependence on analgesics drugs

Intervention groups

Intervention group 1: in the first session dialysis procedure and without any interference cannulation performed. At the second session for 5 minutes before the cannulation, the Damask Rose %10 is inhaled. Intervention group 2: The first session is like Group1. at the second session, 5 minutes before cannulation two puffs of spray lidocaine sprayed on the skin surface location. Control group: Both sessions are performed without any intervention.

Main outcome variables

the pain of fistula cannulation

Scientific title

Comparison of Damask Rose and lidocaine spray on arteriovenous fistula cannulation pain in patients in the hemodialyse ward

Public title

Comparison of Damask Rose and lidocaine spray on arteriovenous fistula cannulation pain in patients in the hemodialyse ward

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Renal failure requires hemodialysis

Exclusion criteria:

Initiation of hemodialysis less than 3 months ago
verbal, mental and vision problems
History of mental illness
Addiction
Dependence on analgesic medicines
Sensitization to local anesthetics and herbal allergens
The ability to smell
Nasal fracture
nose surgery
Severe cold

Age

From **18 years** old to **80 years** old

Sample size

Target sample size: **75**

Randomization (investigator's opinion)

Randomized

Randomization description

The classification blocking method will be used. In this way, patients will be classified according to age, gender, education level and duration of use of the fistula. And in each class, according to the random number table and the six-tier blocks, they are assigned to three groups.

Blinding (investigator's opinion)

Not blinded

Health conditions studied

1

Description of health condition studied

Chronic kidney disease

ICD-10 code

N18.5

ICD-10 code description

Chronic kidney disease, stage 5

Primary outcomes

1

Description

the pain of fistula cannulation

Timepoint

Immediately after the first session without intervention and immediately after the second session with intervention

Method of measurement

visual pain scale

Secondary outcomes

empty

Intervention groups

1

Description

First intervention group: In the first session dialysis procedure and without any interference cannulation performed. At the second session, three drops of 10% Damask Rose on a cotton ball and the volunteer should be inhaled from the interval of 7 to 10 cm for a period of five minutes.

Category

Treatment - Drugs

2

Description

Second intervention group: In the first session dialysis procedure and without any interference cannulation performed. At the second session, 5 minutes before the cannulation, two puff of Lidocaine spray are sprayed 5 cm away from the surface of the target area.

Category

Treatment - Drugs

3

Description

Control group: Both sessions are performed routinely, without any intervention.
