The effect of supportive counseling on the mothers' mental health of premature newborns: a randomised controlled trial

Protocol summary

Study aim

To determine the effect of supportive counseling on mental health in premature infants' mothers.

Design

Randomized controlled trial with two parallel arms.

Settings and conduct

This study will be conducted on 66 mothers with premature infants who have been admitted to the infant's intensive care unit of Al-Zahra hospital. The researcher will refer to hospital and will select women who have been given birth between the week 28 to 33 weeks and 6 days, and they will be invited to participate in the study. Then the Mental Health Questionnaire (MHQ) will be completed by mothers. Individuals who have received a score of less than 24 according to MHQ will be included in the study and written consent will be obtained. Then, the other questionnaires including the socio-demographic information and the postpartum bonding questionnaire will be completed. The researcher will record the weight, height and head circumference of the infant into the anthropometric indices checklist.

Participants will be randomly assigned into two groups of counseling and control. Participants will be followed up 8 weeks after childbirth and MHQ will be completed.

Participants/Inclusion and exclusion criteria

Participants will be women who have been given birth between the week 28 and 33 weeks and 6 days and their babies have been admitted to the NICU.

Intervention groups

The intervention group will receive supportive counseling and control group will receive routine care.

Main outcome variables

The main outcome variable is mental health who will be measured by MHQ in the first 72 hours and at 8 weeks postpartum.

Health conditions studied

1

Description of health condition studied

Mental health

ICD-10 code

Z00.4

ICD-10 code description

General psychiatric examination, not elsewhere classified

Primary outcomes

1

Description

Mental health of mothers

Timepoint

Preintervention in the first 72 hours after delivery, Postintervention in 8 weeks after childbirth

Method of measurement

Mental Health Questionnaire

Secondary outcomes

1

Description

Postpartum bonding

Timepoint

Preintervention in the first 72 hours after delivery, postintervention in 8 weeks after childbirth

Method of measurement

Postpartum Bonding Questionnaire

2

Description

Anthropometric indices of infants

Timepoint

Preintervention in the first 72 hours after delivery, postintervention in 8 weeks after childbirth

Method of measurement

Preintervention based on the infants file, postintervention measured by the researcher

Intervention groups

1

Description

Intervention group: For the intervention group, supportive counseling will be provided during six 45-60 minutes sessions.

Category

Prevention

2

Description

Control group: The control group will be received routine care.
