Comparison of shock-wave Therapy and Low level laser on treatment of the Myofascial Trigger Points of Trapezius Muscles: A Randomized single-blind Clinical Trial

Protocol summary

Study aim

The aim of this research is comparing the effect of shockwave therapy and low level laser on treatment of myofascial trigger points of trapezius muscles. This study is a single-blind clinical trial. Seventy two patients will refer to the Fattemeh physiotherapy clinic in Rafsanjan. Three interventions of this study are shockwave, low level laser and conventional therapy of physiotherapy.

Design

In this study 3 treatment group will done through parallel design and assesses during 1st, 10th sessions and one month later.

Settings and conduct

In this study assessor evaluates the patients refer to Fattemeh physiotherapy clinic and divided them into 3 equal groups randomly.

Participants/Inclusion and exclusion criteria

Inclusion: aged 20-60 years, one month following the onset of pain, pain of trigger points are exist only in trapezius muscles. Criteria for selection of samples is based on Travel and Simons physical examination. Exclusion: tumor, use of anticoagulation drug, very insufficiency of kidney, convulsion, radicular pain due to peripheral nerve diseases of the neck and leaving of study.

Intervention groups

First group will use shockwave therapy by shockwave set (made in Novin company of Iran, 360G, 0.08 milijoule, 1.5 pressure, 100 frequency, 1500 shock during 3 minutes on trigger points). Second Group will use Low level laser set (made in Metron of Australia, 8 joule intensity, 100 mw, 810 nm wave length during 3 minutes on trigger points). Third group (conventional physiotherapy) are includes trapezius stretch, during 5 minutes and ultrasound set (made in ITO Japan, 1 MH frequency, 1.5 watt, during 5 minutes) on trigger point.

Main outcome variables

Intensity of local pain, Stiff of band, Radicular pain, Range of neck motion

Scientific title
Comparison of shock-wave Therapy and Low level laser on treatment of the Myofascial Trigger Points of Trapezius Muscles: A Randomized single-blind Clinical Trial

Public title
The effect of shock-wave and laser on treatment of the myofascial trigger points of trapezius muscles

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Aged 20-60 years one month following the onset of trigger points of trapezius muscles diagnosis of this points of pain based on travel and simons criteria
Exclusion criteria:
Exclusion are includes tumor Using of anti-coagulation drug serve insufficiency of kidney convulsion radicular pain due to pressure on cervical nerve using of steroids drug prior surgery fracture of cervical and back pregnancy leaving of study.

Age
From **20 years** old to **60 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **72**

Randomization (investigator's opinion)
Randomized

Randomization description
Assessor evaluates the patients based on inclusion criteria, then he divides them to random permuted blocks methods in 3 equal groups and refer to therapist.

Blinding (investigator's opinion)
Single blinded

Blinding description
In this study assessor is different from therapist. Assessor is not aware of treatment but therapist and patients are aware from methods of treatment.

Placebo
Not used

Assignment
Parallel

Other design features
none

Health conditions studied

1

Description of health condition studied

Musculoskeletal disease

ICD-10 code

M62.9

ICD-10 code description

Disorder of muscle, unspecified

Primary outcomes

1

Description

Intensity of local pain

Timepoint

1st, 10th sessions and one month later

Method of measurement

By Visual Analogue Scale (VAS)

2

Description

Stiff band

Timepoint

1st, 10th sessions and one month later

Method of measurement

Assessor palpates the area of local pain

3

Description

Radicular pain

Timepoint

1st, 10th sessions and one month later

Method of measurement

Assessor asks for the present or absence of radicular pain from patient.

4

Description

Limitation of movement

Timepoint

1st, 10th sessions and one month later

Method of measurement

Assessor evaluates the present or absence of movements limitation of patients.

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: First group will receive shock-wave therapy by shock-wave set, made in Iran, 360G model. 0.08 millijoule, 1500 shock during 3 minutes on trigger points.

Category

Rehabilitation

2

Description

Intervention group: Second Group will receive Low level laser by low level laser set, made in Australia, 8 joule intensity, 100 mv, 810 nm for 3 minutes on trigger points.

Category

Rehabilitation

3

Description

Intervention group: Third group (conventional physiotherapy) are includes stretch of trapezius muscles during 5 minutes and ultrasound set (made in ITO company of Japan, 7P model, 1 MH frequency, 1.5 watt intensity during 5 minutes) on myofascial trigger point.

Title and more details about the data/document

The data of this study will publish in the medical journal
and internet.

When the data will become available and for how long

It is possible after one year.

To whom data/document is available

All medical and none medical researchers will access to
data.

Under which criteria data/document could be used

It can be used to increase science clinical application.

From where data/document is obtainable

Researchers refers to author, internet, medical journal
and libraries.

What processes are involved for a request to access data/document

It is accessible through the internet and medical journals
by giving the keyword.
