Comparison of the efficacy of adding clonidine to SSRI and treating patients with SSRI alone in patients with treatment-resistant obsessive compulsive disorder

Protocol summary

Study aim
Determine the efficacy of adding clonidine to the treatment of obesity-resistant obesity disorders

Design
Clinical trial with parallel control group, double blind, randomized phase 4 with 30 patients

Settings and conduct
Patients with obsessive-compulsive disorder, based on Clinical Neuropsychiatry 2013, who have been treated with a maximum dose of SSRI or clomipramine for at least 12 weeks, with a scoring scale of more than 16 (YBOCS) and clinics Obsessions at the Noor Hospital and the Psychiatric Clinic will add. 30 patients will be enrolled in this study. In this method, patients will be divided into two groups of intervention and placebo in a randomized block. In this study, patients and therapist are unaware of the drug. In the intervention group, clonidine tablets start with a dose of 0.1 mg per night, and 0.2 mg daily are administered to a maximum of 1 mg per day. placebo will be given to control group. In both groups SSRIs or clomipramines will continue with the previous dose and the YBOCS OCD will be completed at the end of the week 4-8 and 12.

Participants/Inclusion and exclusion criteria
Inclusion Criteria 1-The presence of obsessive-compulsive disorder criteria based on DSM-V-TR 2. Receive at least 12 weeks with a maximum dose of a serotonergic drug (SSRI or clomipramine) 3. moderate or severe symptoms on a scale of obsessive - compulsive Yale-Brown (YBOCS) to score more than 16 ۴. No initial diagnosis of psychiatric disorders and mood disorder (Bipolar or MDD) Exclusion Criteria: 1- Pregnancy at each stage of the research 2- Cancellation of participation in the study at each stage of the research

Intervention groups
Iintervention group, patients initially opened a dose of 0.1 mg of clonidine per night, and each week, 0.2 mg is added to this dose to reach 1 mg / day, and in Control group patients will use placebo.

Main outcome variables
Obsessive-Compulsive Scale YBOCS

Scientific title
Comparison of the efficacy of adding clonidine to SSRI and treating patients with SSRI alone in patients with treatment-resistant obsessive compulsive disorder

Public title
Evaluation of Clonidine Therapeutic Effect Added to Usual Treatment in Refractory Obsessive –Compulsive Disorder
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
The presence of obsessive-compulsive disorder criteria based on DSM-V-TR Receive at least 12 weeks with a maximum dose of a serotonergic drug (SSRI or Clomipramine) Moderate to severe symptoms based on the obsessive-compulsive- Yerobyll-Brown scale (YBOCS) with a score of more than 16 Obtain informed consent from the patient No initial diagnosis of psychiatric disorders and mood disorder (bipolar or MDD) Absence of drug use or dependence There is no uncontrolled physical illness (such as diabetes, blood pressure, etc.) There is no previous history of Clonidine use Lack of pregnancy and lactation or planning for pregnancy during the study There is no seizure disorder No suicide attempt Not taking beta-blocker Failure to receive synchronous psychological intervention
Exclusion criteria:
Cancellation of participation in the study at each stage of the research Pregnancy at each stage of the research
Age
No age limit
Gender
Both

Phase
3
Groups that have been masked

- Participant
- Care provider

Sample size
Target sample size: **30**
Randomization (investigator's opinion)
Randomized
Randomization description
Simple randomization using a random number table for people with obsessive-compulsive disorder. The random numbers and numbers are extracted by the computer and for allocation concealment unique code will be use.
Blinding (investigator's opinion)
Double blinded
Blinding description
Patients do not know about their treatment, and medications are given in asymptomatic packagings to clinicians not to be aware about the pateint's treatment during the course.
Placebo
Used
Assignment
Parallel

Health conditions studied

1

Description of health condition studied
obsessive compulsive disorder
ICD-10 code
F42
ICD-10 code description
Obsessive-compulsive disorder

Primary outcomes

1

Description
OCD Scale changes with YBOCS questionnaire
Timepoint
Before the intervention and at the end of 4-8-12 weeks
Method of measurement
Yale Brown Obsessive-Compulsive Scale (YBOCS)

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: Clonidine tablets start with a dose of 0.1 mg once a night, and weekly (based on patient tolerance) 0.2 mg will add to reach a maximum of one mg per day. This dose is based on the administration of clonidine in other psychiatric disorders

Category
Treatment - Drugs

2

Description
Control group: Will use placebo

Category
Treatment - Drugs

Title and more details about the data/document
All data will be available.
When the data will become available and for how long
Access will begin immediately after the article is publish.
To whom data/document is available
Data will be available to all people.
Under which criteria data/document could be used
All the necessary analyzes can be done and there are no specific conditions for access.
From where data/document is obtainable
Send applicant to Dr. Akuchekian, email her at akuchekian@med.mui.ac.ir
What processes are involved for a request to access data/document
In the shortest time it will be available to the applicant.
