The effect of listening to the voice of Quran on anxiety and depression of elderly .

Protocol summary

Study aim

A Survey on the Effect of Quranic Voice on Anxiety and Depression in the Elderly Residents of Selected nursing home in Shiraz in 1397.

Design

This study was a randomized clinical trial with control group. The sample size was 30 people in each group. The sampling method is performed by random numbers among eligible elderly people, Then using random allocation software, elderly people are divided into two groups: control and test.

Settings and conduct

Research population: All elderly living in the elderly homes of Shiraz and the white Jasmine elderly home in Shiraz city in 1397 with a total of 220 people, after completing the questionnaires, 60 of the elderly with depression and anxiety were selected by random number method. And randomly assigned to two groups of test and control. In the test group, intervention is performed and only care is provided for the elderly of the control group. After 1 month, the questionnaires are given to the test and control groups and completed by the second researcher by the interview method for the blindness Completion of questionnaires is done before and after intervention by two separate scholars.

Participants/Inclusion and exclusion criteria

Entry requirements: 1) aged over 60 years 2) Anxiety and depression Exit terms: 1- Stay in a critical condition such as the death of one of the relatives 2. Elderly hearing impairment.

Intervention groups

In the intervention group, the Surah Maryam (verses 1 through 69) with the voice of the Parhizgar Master each night before bedtime for 30 minutes; through MP3player and headphones for each elderly person, and For the control group elderly will not intervene and take routine care.

Main outcome variables

The two variables that were studied include anxiety and

depression and If the results of the study are positive, the Quran's voice can be considered as one of the nursing care in nursing homes .

Sample size
Target sample size: **60**
Actual sample size reached: **60**

Randomization (investigator's opinion)
Randomized

Randomization description
The population of the study consisted of all elderly people living in the elderly home of Shiraz and the White Jasmines nursing home in Shiraz in 1397. The number of them is 220 people. The reason for choosing these two centers is the presence of elderly men and women in a center. After The questionnaires were filled out among eligible elderly people in order to enter the study, 41 elderly home of Shiraz and 19 elderly of White Jasmines nursing home were selected randomly by random number method and then by Random block method and random allocation software the elderly people put in two groups of control and test each The number of group is 30 elderly.

Blinding (investigator's opinion)
Single blinded

Blinding description
Two researcher assistance was used to collect data, one of which collected the data before intervention, and the other data collected after the intervention, and none of the control and test groups were known. Data analysis

was performed by a statistic consultant, which was not known in either control or test groups

Health conditions studied

1

Description of health condition studied

Anxiety, depression

ICD-10 code

F41.2

ICD-10 code description

Mixed anxiety and depressive disorder

Primary outcomes

1

Description

Anxiety: In this study, anxiety was obtained by earning a minimum score of 20 from Spilberger's apparent and hidden anxiety questionnaire.

Timepoint

Complete Spilberger's apparent and hidden anxiety questionnaire Before and After Intervention within one month

Method of measurement

Spilberger's apparent and hidden anxiety questionnaire

2

Description

Depression: In this study, depression was defined as the minimum score of 10 in the geriatric depression scale.

Timepoint

Complete the Geriatric Depression Scale before and after the intervention within one month

Method of measurement

Geriatric depression scale

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: in the Intervention group, the surah of Maryam (verses 1 through 69) with the voice of the Parhizgar (34 and 35) and simultaneous translation of the Fuladvand with each night before bedtime for 30 minutes; via MP3player and headphones (to remove additional sounds) for each elderly person, Is broadcast for one month.

Category

Treatment - Devices

2

Description

Control group: There is no intervention for the elderly in the control group and only routine care provided by the caretakers of the nursing home.

Title and more details about the data/document

The participants' data file will contain the information on the main outcome and the protocol for the implementation of the study, and the clinical study report and the informed consent form will be shared.

When the data will become available and for how long

6 months after printing results.

To whom data/document is available

Will be available to the general public.

Under which criteria data/document could be used

If the data are used, the origin of the loan must be respected and, if used in other studies, reference is required.

From where data/document is obtainable

Applying to the following email address:
Anursing862@gmail.com

What processes are involved for a request to access data/document

First, a transparent request, containing the reasons for requesting information, how they are used and where they are located, are provided and after a review of about a month and verification of the profile, the information is sent.
