Comparing three types of iron supplementation in pregnant women

Protocol summary

Summary

Iron requirements increase during pregnancy and it causes risk of developing anemia. The present study aimed to compare the effects of daily, 3-times weekly and weekly regimens on hematological markers in non-anemic pregnant women. Serum ferritin, serum iron and Hb were measured for all pregnant women in their 14th week of gestation who attended the prenatal clinics. Women with Hemoglobin levels less than 11g/dL, chronic hematological disorders (Thalassemia, and etc.) and multiple pregnancies were excluded from the study. A hundred and fifty non-anemic pregnant women in their 16th week period of gestation entered the study. Patients were randomized in three groups and they matched by maternal age, number of pregnancies, income and education. First Group (n=50) received one ferrous sulfate tablet daily, second group (n=50) received 50mg ferrous sulfate tablet three times in a week and finally the third group (n=50) received 100mg ferrous sulfate tablets weekly. Markers were checked again at 28th week of pregnancy.

Scientific title

Comparing three types of iron supplementation in pregnant women

Public title

Iron supplementation in pregnancy

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria: Non-anemia pregnant women in their 16th week period of gestation. Exclusion criteria: Women with Hemoglobin levels less than 11g/dL, chronic hematological disorders (Thalassemia, and etc.)

Age

From **17 years** old to **40 years** old

Gender

Female

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: 150

Health conditions studied

1

Description of health condition studied

Iron deficiency anaemia in pregnancy

ICD-10 code

D50.8

ICD-10 code description

Other iron deficiency anaemias

Primary outcomes

1

Description

Hemoglobin

Timepoint

14th week of pregnancy (before iron treatment), 28th week of pregnancy (after iron treatment)

Method of measurement

laboratory

2

Description

Serum iron

Timepoint

14th week of pregnancy (before iron treatment), 28th week of pregnancy (after iron treatment)

Method of measurement

laboratory

3

Description

Serum ferritin

Timepoint

14th week of pregnancy (before iron treatment), 28th week of pregnancy (after iron treatment)

Method of measurement

laboratory

Secondary outcomes

1

Description

Nausea and vomiting

Timepoint

12 week

Method of measurement

Questionnaire

Intervention groups

1

Description

First group :50mg ferrous sulfate tablet daily

Category

Treatment - Drugs

2

Description

Second group: 50mg ferrous sulfate tablet three times in a week

Category

Treatment - Drugs

3

Description

Third group : 100mg ferrous sulfate tablet weekly

Category

Treatment - Drugs
