Iranian Registry of Clinical Trials

14 Sep 2026

Designing and evaluating a smart phone application in children's oral health and comparing the effectiveness of mothers' education through this application with common teaching methods

Protocol summary

Study aim

Designing and evaluating a learning smart phone application. Comparing the effectiveness of training mothers about child oral health care through this application with common teaching methods

Design

Clinical trial with control group .not blinded, randomised

Settings and conduct

A smartphone app for improving oral health in mothers and their children is compared with common teaching methods. The study will be conducted in the special clinic of the Faculty of Dentistry, Tehran University of medical science. Mothers will be assigned randomly, to either common teaching methods group or app group .Before receiving the teaching method,with the help of the mothers of both groups, the knowledge, the attitude of oral health and self-report practice questionnaire on oral health of the mother and the child are completed through the interview.The modified microbial plaque index will be also examined and recorded on their children's teeth. After one and three months, the previous questionnaire will be filled out again by mothers.The plaque index will be evaluated. One researcher gives pre-test and post-test questionnaires to mothers and a second researcher performs statistical analysis. Both researchers are blind to the allocation of participants to groups.

Participants/Inclusion and exclusion criteria

Inclusion: Mothers and their children under the age of 6 years, mothers with smartphones, children under 6 years old Exclusion:Children who have systemic diseases.

Intervention groups

Control group:Mothers who receive common teaching methods Case group:Mothers who receive an app about child oral health

Main outcome variables

Change in knowledge, attitude and practice of mothers

Change in plaque index of baby

Scientific title
Designing and evaluating a smart phone application in children's oral health and comparing the effectiveness of mothers' education through this application with common teaching methods

Public title
Evaluating the effect of a mobile smartphone software in child oral health and comparing its effectiveness with common teaching methods

Purpose
Education/Guidance

Inclusion/Exclusion criteria
Inclusion criteria:
 Mothers who have smart phone. Children aged less than 6 years
Exclusion criteria:
 Children who have systemic diseases

Age
From **1 year** old to **6 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **90**

Randomization (investigator's opinion)
Randomized

Randomization description
Block randomisation method, using an Excel spreadsheet: In the Excel spreadsheet the leftmost column shows the total number of participants, which in the current study will be 116. The next column indicates the group to which participants belong, with the top half in Group A and the bottom half in Group B. For the next column is filled using the " Rand() "function; this function generates random numbers for all individuals. Finally, we arrange the random numbers in ascending order, so the individuals will be randomly ordered within each of the two groups. Random unit: individual Randomization Tool: Software

Blinding (investigator's opinion)
Not blinded

Blinding description

Placebo
Not used

Assignment

Health conditions studied

1

Description of health condition studied

Knowledge, attitude and practice of mothers regarding oral health

ICD-10 code

ICD-10 code description

2

Description of health condition studied

Microbial plaque

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Mother's score in knowledge, attitude, and practice questionnaire

Timepoint

Before the intervention, one month after the intervention, three months after the intervention

Method of measurement

Knowledge, attitude and practice questionnaire on oral health

2

Description

Microbial Plaque

Timepoint

Before the intervention, one month after the intervention, three months after the intervention

Method of measurement

Clinical examination

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Mothers who receive an app about child oral health. This app is designed with the Java programming language and for the Android operating system, including: Brushing movies, introducing caries, nutritional recommendations, use of fluoridated toothpaste and information about oral health. The app also sends a notification for brushing to mother's mobile every night at nine o'clock.

Category

Lifestyle

2

Description

Control group: Mothers who receive common teaching method including scrub brushing technique for children, Nutrition recommendations, use of fluoridated toothpaste and a pamphlet about oral health.
