The Effects of Ischemic Compression, Phonophoresis of Hydrocortisone and Ultrasound on Some of the Clinical Parameters in Latent Myofascial Trigger Point of the Upper Trapezius Muscle

Protocol summary

Summary

Introduction: Myofascial trigger points (MTrPs) is a sensitive nodule in palpable taut band that may be active or latent. As high as 85% to 93% of patients presenting to specialty pain management centers are given with MTrPs. There are some treatments for MTrPs in two types of manual and electrical medicine. In manual medicine, ischemic compression is a common treatment. The aim of this study was to investigate the effects of ischemic compression, phonophoresis of Hydrocortisone 1% and ultrasound on pain, pain pressure threshold and cervical lateral flexion in muscles with MTrPs. Material & Methods: this study was interventional. Sixty subjects, aged 20-30 years old diagnosed with MTrPs in the upper trapezius muscle participated in this study. The main factor was presence of a hypersensitive tender spot in the taut band in response to 25N or lesser. Subjects were randomly divided into four groups: which were treated with ischemic compression, phonophoresis of Hydrocortisone, ultrasound and control group. In all six sessions the treatments and assessments were done. The factors were pain, pain pressure threshold and cervical lateral flexion in 2 directions.

Scientific title

The Effects of Ischemic Compression, Phonophoresis of Hydrocortisone and Ultrasound on Some of the Clinical Parameters in Latent Myofascial Trigger Point of the Upper Trapezius Muscle

Public title

the evidence of three treatments on trigger points

Purpose

Treatment

Inclusion/Exclusion criteria

inclusion: 1. Presence of a palpable taut band in a skeletal muscle 2. Presence of a nodule 3. Presence of a hypersensitive tender spot in the taut band in response to 25 N or lesser. exclusion: 1. Diagnosis of fibromyalgia syndrome 2. History of a whiplash injury 3. History of cervical spine surgery 4. Diagnosis of cervical radiculopathy or myelopathy determined by their primary care physician 5. Having myofascial therapy with in the past month before the study 6. presence of spontaneous the typical referred pain pattern (Active Trigger Point) 7. Presence of a Jump sign 8. The period menstrual cycle 9. Presence of Postural disorders

Age

From **20 years** old to **30 years** old
