Design, Implementation and Evaluation of a Cervical Cancer Prevention Behavior Training Program for Women of Reproductive Age 18-49 in Andimeshk in 1399-1998

Protocol summary

Study aim

Design, implementation and evaluation of the effect of training program on cervical cancer screening behavior in women of reproductive age 18-49 years

Design

Sample size obtained using the formula $n = ((Z_{(1-\alpha/2)} + Z_{(1-\beta)})^2 (\delta_1^2 + \delta_2^2)) / (\mu_1 - \mu_2)^2$
Thirty-six patients were included, accounting for 15% of the probability of loss for the 42 group. Randomization of the samples will be done to maintain equilibrium in the number of subjects belonging to the control and intervention groups and to obtain the maximum power in the study using a randomized block design with four blocks. These duplicate random blocks will be performed for each cluster individually.

Settings and conduct

At this stage, to obtain a random sample that represents all women in the city; a sample of Andimeshk women in order to achieve the status of knowledge, attitude, self-efficacy, and performance of women in Pap smear screening, setting up, and providing targeted educational content. The second phase will be studied.

Participants/Inclusion and exclusion criteria

Inclusion criteria 1. Women of childbearing age 18-49 (who have been married at least once, regardless of their current marital status), Resident of Andimeshk 3. Minimum literacy reading and writing 4. Has a minimum age of 18 years and a maximum of 49 years 5. Written consent to participate in the study Exclusion criteria 1. Cervical cancer or other STDs 2. Opt out of study 3. Inability to read and write

Intervention groups

All women who qualify for the study will be given a pre-test. After completing the questionnaire, individuals will be divided into intervention and control groups according to their evaluation and mean score. The control group will not be given specific action or training.

Main outcome variables

Promoting Knowledge, Attitude, Self-efficacy, and Practice About Cervical Cancer Screening

Assignment
Parallel

Other design features
This is a two-stage study; the first stage is a cross-sectional descriptive study with the aim of determining knowledge, attitude, self-efficacy and practice about cervical cancer of women of reproductive age 18-49 in Andimeshk. The second phase of an experimental study with a control group with the overall aim of evaluating a cervical cancer screening training (Pap smear) training program in women of reproductive age 18-49 years in

Andimeshk. First, all women who met the inclusion criteria. After completing the questionnaire, the subjects will be divided into two intervention and control groups according to their evaluation and mean score.

Health conditions studied

1

Description of health condition studied

Screening for cervical cancer (Pap smear)

ICD-10 code

C53

ICD-10 code description

Malignant neoplasm of cervix uteri

Primary outcomes

1

Description

Improve cervical cancer screening behavior

Timepoint

Before the intervention, one month and three months after the intervention

Method of measurement

Questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: The intervention group in this study consisted of 42 people who scored less than average after the pre-test; the intervention in this study will be educational. After completing the first phase of the study (cross-sectional) and assessing the educational needs of the questionnaire, the educational content will be formulated in 4 constructs of knowledge, attitude, self-efficacy and performance. And will be delivered in 3 training sessions for one month.

Category

Behavior

2**Description**

Control group: The control group in this intervention consisted of 42 subjects who received a mean and higher score after the pre-test; no intervention for the control group. Post-test will be performed by Pap smear screening questionnaire from both intervention and control groups. This post-test will also be repeated 3 months after the end of training for both groups.

Title and more details about the data/document

In this study, data can be shared after people are unrecognizable. Statistical analysis and intervention program reporting will also be shared.

When the data will become available and for how long

+Access to study documentation will begin 6 months after the results are published.

To whom data/document is available

Study documentation will be available to researchers working in academic and scientific institutions.

Under which criteria data/document could be used

Study documentation will be available only to researchers working in academic and scientific institutions and will not be available to others.

From where data/document is obtainable

1. Dr. Alireza Heidarnia, Professor of Health Education, Tarbiat Modares University email: hidarnia@modares.ac.ir 2- Shahnaz Ghavavandi MSc Student of Health Education, Tarbiat Modarres University email: ghalavandishahnaz@modares.ac.ir

What processes are involved for a request to access data/document

Writing the request clearly defines what part of the applicant's actual need is to study the documentation. Submit request via email provided in the study.
