The Effect of Topical Application of Aloe Vera Gel on IL-1B, IL-17 of Crevicular Fluid in patients with chronic Periodontitis

Protocol summary

Study aim

The Effect of Topical Application of Aloe Vera Gel on IL-1B, IL-17 of Crevicular Fluid in patients with chronic Periodontitis

Design

A randomized controlled clinical trial with parallel, single-blind, randomized groups

Settings and conduct

Patient clinical parameters included plaque index (PI by O'Leary 1972 index), gingival index (GI, Loe & Sillness), and probe depth (PD, by Williams 6-tooth probe) at four dental surfaces (mesial, distal, buccal, and lingual) will be reviewed. Then SRP is done. Each person's mouth is randomly divided (dice throw) into two case and control areas. Aloe vera gel will be injected into the periodontal envelope using an insulin syringe. For the opposite control teeth, distilled water replaces the aloe vera gel. Clinical marker measurements will be performed by an examiner who is blind to the type of treatment. IL-1B and IL-17 will be measured using ELISA kit.

Participants/Inclusion and exclusion criteria

Entrance: Moderate to severe chronic periodontitis, Age 35-50, At least 4 teeth with probe depth of 4 mm in each jaw quadrant, Patients candidate for non-surgical treatment Exit: Allergy to Aloe vera, Use of tobacco, Endodontic and periodontal compound lesions, Periapical lesions, Pregnancy, Severe dental caries, Semi-impacted teeth, Orthodontic patients, Systemic diseases and systemic or topical antibiotic users 6 Months before study, Patients with periodontal disease during the past 6 months and patients receiving periodontal treatment 6 months before study, Patients receiving NSAIDs one month before sampling

Intervention groups

Each person's mouth is randomly divided into two case and control areas. Aloe vera gel will be injected into the periodontal envelope using an insulin syringe. For the opposite control teeth, distilled water replaces the aloe vera gel.

Main outcome variables

Clinical parameters; IL-1B; IL-17

Scientific title
The Effect of Topical Application of Aloe Vera Gel on IL-1B, IL-17 of Crevicular Fluid in patients with chronic Periodontitis

Public title
Evaluation of Alvora Gel in Inflammatory Factors in Patients with Periodontitis

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Moderate to severe chronic periodontitis Age 35-50
Have at least 4 teeth with probe depth of 4 mm or more in each jaw quadrant Consent to participate in the study
Patients candidate for non-surgical treatment
Exclusion criteria:
Allergy to aloe vera or its products Use of tobacco
Endodontic and periodontal compound lesions Periapical lesions Pregnancy Severe dental caries Semi-impacted teeth Orthodontic patients Systemic diseases and systemic or topical antibiotic users 6 Months before study
Patients with periodontal disease during the past 6 months and patients receiving periodontal treatment 6 months before study Patients receiving NSAIDs one month before sampling

Age
From **35 years** old to **50 years** old

Gender
Both

Phase
4

Groups that have been masked

- Outcome assessor

Sample size
Target sample size: **34**
More than 1 sample in each individual
Number of samples in each individual: **2**
Two areas of the mouth are used as two samples of test and control

Randomization (investigator's opinion)
Randomized

Randomization description
The patients will be randomly divided into two intervention groups using dice throwing and even and odd numbers. The intervention group will be the odd numbers and the control group will be even numbers.

Blinding (investigator's opinion)
Single blinded

Blinding description
All measurements will be performed by an examiner who is blind to the type of treatment

Placebo
Used

Assignment
Parallel

Health conditions studied

1

Description of health condition studied

Periodontitis

ICD-10 code

K05.3

ICD-10 code description

Chronic periodontitis

Primary outcomes

1

Description

Plaque Index (PI)

Timepoint

Before entrance in the study and 30 days after initial treatment

Method of measurement

Using the index (O'Leary 1972)

2

Description

Gingival Index (GI)

Timepoint

Before entrance in the study and 30 days after initial treatment

Method of measurement

According to the Loe & Sillness Index

3

Description

Probe depth (PD)

Timepoint

Before entrance in the study and 30 days after initial treatment

Method of measurement

Using Williams probe 6 levels of teeth

4

Description

IL-1B

Timepoint

Before entrance in the study and 30 days after initial treatment

Method of measurement

Using ELISA kit

5

Description

IL-17

Timepoint

Before entrance in the study and 30 days after initial treatment

Method of measurement

Using ELISA kit

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group:Aloe vera gel will be injected into the periodontal envelope using an insulin syringe so that the gel enters and fills up to the apical envelope and the gel exits the gingival margin.

Category

Treatment - Drugs

2

Description

Control group: Distilled water will be injected into the periodontal envelope using an insulin syringe so that the water enters and fills up to the apical envelope and exits the gingival margin.

Category

Placebo

Title and more details about the data/document

The data obtained from the participants can be presented in the form of a table. The protocol for the study, which is routine methods, has no problems with its publication. Statistical analysis can also be provided. In this study, an informed consent form will be used that can be published without mentioning the person's name and personal details. A clinical study report can be made after the necessary analyzes.

When the data will become available and for how long

Start the access period 9 months after publishing the results

To whom data/document is available

For researchers in Dental school of Tabriz University

Under which criteria data/document could be used

For scholars working in other academic and academic institutions, if approved by the project implementer

From where data/document is obtainable

Dr. Masoomeh Faramarzi, email or phone Dental school of Tabriz University, Periodontics department, 9144113420 0098 , faramarzim@tbzmed.ac.ir

What processes are involved for a request to access data/document

After receiving the request will be answered within a week.
