Evaluation of the efficacy and safety of Umifenovir in the treatment of hospitalized patients with covid-19: A randomized clinical trial

Protocol summary

Study aim
Evaluation of efficacy and safety of umifenovir in the treatment of the patients with covid-19

Design
Phase 3,2 arms each arms 50 patients, block randomization Two arm parallel group double blind randomised trial , one group as a placebo control group and another one intervention group, physicians and patients are blind

Settings and conduct
Sina hospital, randomize double blind(physicians and patients are blind) Patients are divided in two groups by Block Randomization method, one group as a placebo control group and another one as an intervention group

Participants/Inclusion and exclusion criteria
Inclusion criteria: -age>18 -Patients with probable and definitive diagnosis of covid-19 -Presence of at least one clinical sign(fever,chill,myalgia,cough) with positive virologic specimen response or imaging findings for covid-19 Exclusion criteria: -Patients or companion dissatisfaction to enter or continue the study -History or symtoms for hypersensivity to drug -Pregnancy/lactation

Intervention groups
Intervention group: Hydroxychlorquine 400 mg every 12 hours in the first day then 200 mg every 12 hours ,Atazanavir/Ritonavir 300/100 mg once daily, Uumifenovir 100 mg 2 capsules every 6 hours. Control group: Hydroxychloroquine 400 mg every 12 hours for the first day then 200 mg every 12 hours Atazanavir / ritonavir 300/100 mg, two placebo capsules (hand made) every 6 hours.

Main outcome variables
Clinical improvment includes Fever rupture,Spo2 >93 ,Improvment of respiratory symptoms.

Scientific title
Evaluation of the efficacy and safety of Umifenovir in the treatment of hospitalized patients with covid-19: A randomized clinical trial

Public title
Umifenovir effectiveness in the treatment of COVID-19
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
Age >18 years old Patients with a probable and definitive diagnosis of COVID-19 who are candidates for hospitalization and receiving antiviral regimens. Presence of at least one clinical sign (including fever, chills, cough, myalgia) with positive virologic specimen or imaging findings for COVID-19
Exclusion criteria:
Patient or fellows' dissatisfaction with entering or continuing the study History or any signs of hypersensitivity to umifenovir Pregnancy and lactation
Age
From **18 years** old
Gender
Both

Phase
3
Groups that have been masked

- Participant
- Care provider
- Investigator
- Outcome assessor

Sample size
Target sample size: **100**
Randomization (investigator's opinion)
Randomized
Randomization description
In this study, we will use block randomization methods using four patents blocks that randomized by (RAND) function in Excel .The patient code table is provided to the analyzer and will be used for analysis after completion of the study.
Blinding (investigator's opinion)
Double blinded
Blinding description
In this study: The patient, the physician, the nurses, and the researchers are blind. The data analyst knows the details of the treatment regimen.
Placebo
Used
Assignment
Parallel

Health conditions studied

1

Description of health condition studied
Covid-19
ICD-10 code
U07.1
ICD-10 code description
Covid-19

Primary outcomes

1

Description
Clinical improvement includes fever rupture
Timepoint
Since admission to the hospital then daily monitoring
Method of measurement
Physical examination, thermometer, questionnaire

2

Description
Clinical improvement includes SPO2 >93%
Timepoint
Since admission to the hospital then daily monitoring
Method of measurement
Physical examination, pulse oxymetery,questionnaire

3

Description
Improvement of respiratory symptoms
Timepoint
Since admission to the hospital then daily monitoring
Method of measurement
Physical examination, ct scan,questionnaire

4

Description
Adverse effects
Timepoint
Since admission to the hospital then daily monitoring
Method of measurement

Questionnaire, physical examination

Secondary outcomes

1

Description
Duration of hospitalization
Timepoint
7 days to 1 months after beginning the treatment
Method of measurement
Questionnaire

2

Description
Clinical outcome
Timepoint
7 days to 1 months after beginning the treatment
Method of measurement
Questionnaire

3

Description
Lipoxin
Timepoint
day-0, day-2, day-4
Method of measurement
measuring the plasma concentration of the biomarker with ELISA kit

4

Description
prostaglandin
Timepoint
day-0, day-2, day-4
Method of measurement
measuring the plasma concentration of the biomarker with ELISA kit

5

Description
leukotriene
Timepoint
day-0, day-2, day-4
Method of measurement
measuring the plasma concentration of the biomarker with ELISA kit

6

Description
resolvin
Timepoint
day-0, day-2, day-4
Method of measurement
measuring the plasma concentration of the biomarker with ELISA kit

Intervention groups

1

Description
Intervention group: Hydroxychloroquine 400 mg every 12 hours for the first day then 200 mg every 12 hours Atazanavir / ritonavir 300/100 mg once daily. Arbidol 100 mg(manufactured by Pharmstandard)2 capsules every 6 hours.
Category
Treatment - Drugs

2

Description
Control group: Hydroxychloroquine 400 mg every 12 hours for the first day then 200 mg every 12 hours Atazanavir / ritonavir 300/100 mg, two placebo capsules (hand made) every 6 hours.
Category
Placebo
