

Clinical Trial Protocol

Iranian Registry of Clinical Trials

31 May 2026

Comparative assessment of the efficacy and safety of add ontreatment with “Sofosbuvir plus Velpatasvir” to “standard of care therapeutic regimen” in patients with COVID-19

Protocol summary

Study aim

Comparison of the effectiveness and safety of the addition of Sofosbuvir plus Velpatasvir to standard treatment regimens in patients with COVID-19

Design

This study is one blinded clinical trial. The study population will be all patients infected with COVID-19 admitted to Golestan hospital of Kermanshah. 80 eligible patients will be selected conveniently and randomly assigned to two intervention groups.

Settings and conduct

The study, which will be conducted at Golestan Hospital of Kermanshah, is one-blinded one that participants are unaware of the type of treatment they receive. At the beginning of the study, the patient's clinical status is recorded in a checklist.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Age over 18 years; Absolute lymphocyte count <1100 / ML or SaO2 <93 Exclusion criteria: Pregnancy or breast-feeding The physician's decision that the trial is not in the patient's interest Any circumstances that do not allow the treatment protocol to be followed easily A history of severe liver disease including cirrhosis or ALT or AST levels more than fives times normal Drugs that are contraindicated with standard treatment or Sofosbuvir-Velpatasvir and cannot be discontinued History of untreated HIV infection or hepatitis C

Intervention groups

The intervention group in addition to 400 mg of hydroxychloroquine and 100 to 400 mg of Lupinavir-ritonavir at a time, will receive 100 to 400 mg of Sofosbuvir-Velpatasvir for 10 days. The control group will receive 400 mg of hydroxychloroquine and 100 to 400 mg of lupinavir-ritonavir for 10 days at a time.

Sample size
Target sample size: **80**

Randomization (investigator's opinion)
Randomized

Randomization description
Using the random number table, patients are divided into two groups of 40. Each patient is assigned a 4-digit code based on the random number table, Based on the right number of patients code, the patients are divided into two groups. Patients whose last digit is 0, 2, 4, 6, 8 will be assigned to the intervention group and patients whose last digit is 1,3,5, 7, 9 will be assigned to the control group.

Blinding (investigator's opinion)
Single blinded

Blinding description
In this study, patients will be kept blind to the type of treatment.

Placebo
