

Clinical Trial Protocol

Iranian Registry of Clinical Trials

23 Feb 2026

Evaluation of the therapeutic effects of Convalescent Plasma (CP) of recovered people from Covid-19 in improving clinical and laboratory symptoms of hospitalized patients

Protocol summary

Study aim

Evaluation of the therapeutic effects of Convalescent Plasma (CP) of recovered people from Covid-19 in improving clinical and laboratory symptoms of hospitalized patients

Design

The clinical trial with a control group, with parallel groups, non-randomized, single-center. The sample size is 12 patients (consist of 2 groups of 6 control and intervention).

Settings and conduct

This study will be performed at Kosar hospital in Semnan. Convalescent plasma from COVID-19 recovered people will be injected to hospitalized patients suffering from COVID-19.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Complete resolution of COVID-19 disease symptoms at least 14 days prior to donation; Donors do not have a history of blood or blood product transfusion; COVID-19 neutralizing antibody titers be greater than 1:320 (If possibly checked); Negative results for COVID-19 by PCR; Respiratory frequency \geq 30/min. Exclusion criteria: Negative real-time PCR from respiratory secretions or blood within 48 h prior to CP transfusion; History of allergic reaction to blood or plasma products; Known IgA deficiency.

Intervention groups

Intervention group: Administration of 2 units of intravenous CP (Convalescent Plasma obtained from COVID-19 recovered people thorough plasmapheresis). Each unit of plasma that is collected from one different donor will be given over 2 h with an interval of 1 h between the two units. Control group: Patients with COVID-19 will receive conventional treatment.

Main outcome variables

Checking the amount of ventilation; White blood cell count, CRP in patients with COVID-19; Percentage of T

CD8 in peripheral blood; Percentage of T CD4 in peripheral blood; C-Reactive Protein (CRP) in patients with COVID-19

Scientific title
Evaluation of the therapeutic effects of Convalescent Plasma (CP) of recovered people from Covid-19 in improving clinical and laboratory symptoms of hospitalized patients

Public title
Therapeutic effects of plasma of recovered people from COVID-19 on hospitalized patients with this disease

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
(As a plasma donor): Complete resolution of COVID-19 disease symptoms at least 14 days prior to donation. (As a plasma donor): Donors do not have a history of blood or blood product transfusion (As a plasma donor): COVID-19 neutralizing antibody titers be greater than 1:320 (If possibly checked) (As a plasma donor): The donor's age be between 25 and 55 years old (As a plasma donor): Negative results for COVID-19 by PCR (As a plasma donor): Be in suitable general health condition for plasmapheresis (As a plasma recipient): Patients admitted to the ICU who is receipt of mechanical invasive or non-invasive ventilation, partial pressure of arterial oxygen to fraction of inspired oxygen ratio < 300mmHg (93%). Current receipt of intravenous vasoactive medications to maintain mean arterial pressure >65 mmHg (As a plasma recipient): Respiratory frequency ≥ 30/min (As a plasma recipient): Laboratory-confirmed COVID-19 infection (by real time PCR).
Exclusion criteria:
(As a plasma recipient): Negative real-time PCR from respiratory secretions or blood within 48 h prior to CP transfusion (As a plasma recipient): History of allergic reaction to blood or plasma products (As a plasma recipient): Known IgA deficiency

Age
From **25 years** old to **55 years** old

Gender
Both

Phase
3

Health conditions studied

1

Description of health condition studied

COVID-19

ICD-10 code

U07.1

ICD-10 code description

COVID-19, virus identified

Primary outcomes

1

Description

Checking the amount of ventilation

Timepoint

Before intervention, 30 minutes after each step of intervention and daily

Method of measurement

Artificial respirator or ventilator

2

Description

White blood cell count, CRP in patients with COVID-19

Timepoint

Every 24 hours (Before and after intervention)

Method of measurement

Cell counter

3

Description

Percentage of T CD8 in peripheral blood

Timepoint

Before and after the intervention

Method of measurement

Evaluation of T CD8 percentage by Flow cytometry

4

Description

Percentage of T CD4 in peripheral blood

Timepoint

Before and after the intervention

Method of measurement

Evaluation of T CD4 percentage by Flow cytometry

5

Description

C-Reactive Protein (CRP) in patients with COVID-19

Timepoint

Every 24 hours (Before and after intervention)

Method of measurement

Rapid test

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Administration of 2 units of CP (Convalescent Plasma obtained from COVID-19 recovered people thorough plasmapheresis) (IV). Each unit of plasma that is collected from one different donor will be given over 2 h with an interval of 1 h between the two units.

Category

Treatment - Drugs

2

Description

Control group: Patients with COVID-19 will receive conventional treatment.
