

Clinical Trial Protocol

Iranian Registry of Clinical Trials

09 Jun 2026

Evaluation of the effect of herbal oral product (thyme syrup) in patients with COVID-19

Protocol summary

Study aim

Evaluation of the effect of herbal oral product (thyme syrup) in patients with COVID-19

Design

152 patients between the ages of 30 and 65 with a probable diagnosis of COVID-19 according to the national protocol, after applying the inclusion and exclusion criteria of the study and completing the conscious consent form with block randomization are placed in one of the intervention and control groups.

Settings and conduct

This study is a type of clinical trial that is not blind and patients who refer to Imam Khomeini Hospital in Sari are diagnosed with COVID-19 manifestation will entered. Then, 152 patients between the ages of 30 and 65 with a probable diagnosis of COVID-19 according to the national protocol, after applying the inclusion and exclusion criteria of the study and completing the conscious consent form with block randomization are placed in one of the intervention and control groups.

Participants/Inclusion and exclusion criteria

Patients between 30 and 65 years with Probable diagnosis of COVID-19 based on national Iranian protocol

Intervention groups

Intervention group: Corona standard treatment + herbal syrup (Iranian medicine product made by the research team): 100 cc of the syrup is mixed with 100 cc of hot water and eaten 30 minutes after a meal (three times a day). Control group: Corona standard treatment according to the national protocol of the Ministry of Health of Iran.

Main outcome variables

Blood oxygen saturation, shortness of breath, length of hospital stay

Scientific title

Evaluation of the effect of herbal oral product (thyme syrup) in patients with COVID-19

Public title

The effect of herbal syrup on patients with corona

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Probable diagnosis of COVID-19 based on national Iranian protocol

Exclusion criteria:

Late 5 days from the onset of symptoms Existence of comorbidity Pregnancy and lactation history of Allergy Complicated with bacterial infection

Age

From **30 years** old to **65 years** old

Gender

Both

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: **152**

Randomization (investigator's opinion)

Randomized

Randomization description

Before intervention, each patient selects one of the 152 envelopes that contain the codes 0001 to 0152, then by having the selected code and using the output table of Block randomization statistical software, it is determined the patient in which group: intervention or controls.

Blinding (investigator's opinion)

Not blinded
