Effect of circuit training on some physiological factors, lower leg muscle activity, gross motor function and activity daily living on spastic cerebral palsy children

Protocol summary

Study aim

Effect of circuit training on some physiological factors, lower leg muscle activity, gross motor function and activity daily living on spastic cerebral palsy children

Design

In this study, 34 children with cerebral palsy will be voluntarily attended. Which are randomly divided into two groups of experimental group (n=17) and control group (n=17).

Settings and conduct

The present study is a randomized controlled trial on children with cerebral palsy in Rasht city. Subjects will attend a circular exercise program for 12 weeks. Measurement of some physiological factors, lower extremity muscle activity, gross motor function and daily life activity, before and after 12 weeks of circular training will be performed.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Having age ranges of 7-16 years
Spastic diplegia cerebral palsy Ambulation ability
Exclusion criteria: More than three session absence from the training Botox injection or surgery in period of intervention

Intervention groups

Intervention group: 12 weeks of high intensity circuit training, three sessions per week, in each training session of 3 round of training circle, which consists of 6 training stations, with 30 seconds of exercise and 30 seconds break between, them as: sit to stand exercise, heel rises, forward lunges, and a lateral step-up exercise, lifting the medicine ball of the floor and placing on the chair and a motivational game station throwing off the ball Within the basket of 5 meters from a warm-up at the beginning of the session and a cool down at the end of the session. In addition 12 weeks and one session per week of normal occupational therapy training Control group: 12 weeks and one session per week of normal

occupational therapy

Main outcome variables

Gross Motor Function and Lower leg muscle activity

Scientific title
Effect of circuit training on some physiological factors, lower leg muscle activity, gross motor function and activity daily living on spastic cerebral palsy children

Public title
Effect of circuit training on cerebral palsy children

Purpose
Supportive

Inclusion/Exclusion criteria
Inclusion criteria:
Having age ranges of 7-16 years Spastic diplegia cerebral palsy Ambulation ability
Exclusion criteria:
More than three session absence from the training Botox injection or surgery in period of intervention

Age
From **7 years** old to **16 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **34**

Randomization (investigator's opinion)
Randomized

Randomization description
The present study is a randomized controlled trial that thirty four children were selected as participants in the research process. After the necessary investigations and based on the information of the completed questionnaires, the subjects were divided into two groups of 17 people using a lottery by simple random method.

Blinding (investigator's opinion)
Not blinded

Health conditions studied

1

Description of health condition studied

Cerebral Palsy

ICD-10 code

G80

ICD-10 code description

Cerebral palsy

Primary outcomes

1

Description

Gross Motor Function

Timepoint

Before an after of end of intervention

Method of measurement

Using Gross Motor Function Measure (GMFM)

2

Description

Lower leg muscle activity

Timepoint

Before an after of end of intervention

Method of measurement

Using Electromyography device (EMG and evoked-potentialemg-meb-9400k)

Secondary outcomes

1

Description

Body composition

Timepoint

before and after the end of intervention

Method of measurement

With the use of weights, height, gender and SAEHAN Hand Calipers and the Slater Kids Body Composition formula

2

Description

Strength

Timepoint

Before an after of end of intervention

Method of measurement

Using SAEHAN Hand-Grip Dynamometer and SAEHAN Back, Leg & Chest Dynamometer

3

Description

Balance

Timepoint

Before an after of end of intervention

Method of measurement

Using Berg Balance Scale

4

Description

6 Minute Walk Distance

Timepoint

Before an after of end of intervention

Method of measurement

6 Minute Walk Test

5

Description

Activity Daily Living

Timepoint

Before an after of end of intervention

Method of measurement

Using Activity Scale for Kids (ASK)

Intervention groups
