Comparing of the effect of reflexive and strock massages on physiologic indices and anxiety in patients with MI

Protocol summary

Summary

This study with the goal of comparing of the effect of reflexive and strock massages on physiologic indices and anxiety in patients with MI was accomplished. Inclusion criteria: suffering from MI for the first time; ability for communication; Exclusion criteria: suffering from another MI; Hypertension resistance to treat; The study population was the patients hospitalized in Imam Reza and Imam Ali Hospitals in Kermanshah which their MI was diagnosed by cardiologist. Sample size was equal to 105 patients which were assigned into 3 groups with 35 samples randomly. Intervention: Group1: Doing Strock massage on the patient during 5 minutes/ in two times of morning (9-11) and evening (17- 19). Group2: Doing Reflexive massage on the patient during 5 minutes/ in two times of morning (9-11) and evening (17- 19). Group 3 (control): Just providing routine care Then the effect of reflexive and strock massages on physiologic indices (primary out comes) and anxiety (secondary out come) will determined.

Scientific title

Comparing of the effect of reflexive and strock massages on physiologic indices and anxiety in patients with MI

Public title

Effect of reflexive and strock massages on MI complications

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: suffering from MI for the first time; ability for communication; having no diabetes Mellitus, skin and neurogenic disorders and wound or fractures on limbs; Exclusion criteria: suffering from another MI; Hypertension resistance to treat; neoplasia; unconsciousness; having extensive surgery; active infection

Age

From **45 years** old to **75 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **105**
