Clinical Trial Protocol
Iranian Registry of Clinical Trials

27 Jun 2026

Comparison of therapeutic effects of hemoperfusion in intubated and non-intubated patients with respiratory failure caused by the COVID-19

Protocol summary

Study aim

Determination of therapeutic effects of hemoperfusion in intubated and non-intubated patients with respiratory failure caused by the COVID-19

Design

Clinical trial with one intervention group, with no control group and no blindness on 40 hospitalized patients with severe forms of COVID-19.

Settings and conduct

This nonrandomized with no blindness clinical trial will be performed in Loghman Hakim Hospital on patients after obtaining permission from the ethics committee on patients with respiratory failure caused by the COVOID-19, who are on antiviral medication according to national protocol. Patients will be divided into two groups; intubated and non-intubated. Intervention group will be treated with hemoperfusion. Laboratory and clinical finding will be evaluated. The data will be analyzed by SPSS software.

Participants/Inclusion and exclusion criteria

The participants are hospitalized patients with severe forms of COVID-19. Inclusion Criteria: Patients with diagnosis of COVID-19 based on the clinical manifestations, lung CT-scan, testing of pharyngeal sample using real-time PCR and the physician´s diagnosis; Patients who have SpO2 less than 85%, and no improvement has been achieved despite 48 hours of standard treatment. Exclusion Criteria: Plasma platelets count less than 30000 per microliter; Multiple organ failure

Intervention groups

Intervention group: 40 eligible patients with severe COVID-19 in a 1:1 ratio: (20 intubated and 20 non-Intubated)hemoperfusion + Standard of care treatment

Main outcome variables

O2 Saturation CRP Ferritin Vasopressor need Length of hospital stay Mortality

Scientific title

Comparison of therapeutic effects of hemoperfusion in intubated and non-intubated patients with respiratory failure caused by the COVID-19

Public title
The role of hemoperfusion in COVID-19
Purpose
Supportive
Inclusion/Exclusion criteria
Inclusion criteria:
Hospitalized patients with respiratory failure caused by the COVID-19
Exclusion criteria:
Age
From **18 years** old
Gender
Both

Phase
2
Groups that have been masked
No information
Sample size
Target sample size: **40**
Randomization (investigator's opinion)
Not randomized
Randomization description
Blinding (investigator's opinion)
Not blinded
Blinding description
Placebo
Not used
Assignment
Single
Other design features

Secondary Ids

empty

Ethics committees

1

Ethics committee
Name of ethics committee
Ethics committee of Shahid beheshti University of Medical Sciences
Street address
Yaman St, Velenjak, Shahid Chamran Highway
City
Tehran
Province
Tehran
Postal code
19857-17443
Approval date
2020-10-13, 1399/07/22
Ethics committee reference number
IR.SBMU.RETECH.REC.1399.582

Health conditions studied

1

Description of health condition studied
COVID-19
ICD-10 code
U07.1
ICD-10 code description
COVID-19

Primary outcomes

1

Description
O2 Saturation
Timepoint
Before and after the sessions of hemoperfusion
Method of measurement
Pulse Oximetry

2

Description
CRP
Timepoint
Before and after the sessions of hemoperfusion
Method of measurement
Blood level

3

Description
Ferritin
Timepoint
Before and after the sessions of hemoperfusion
Method of measurement
Blood level

4

Description
Vasopressor need
Timepoint
Before and after the sessions of hemoperfusion
Method of measurement
Observation

Secondary outcomes

1

Description
Lenght of hospitat stay
Timepoint
Daily up to discharge
Method of measurement
Days of hospitalization

2

Description
Mortality
Timepoint
Daily up to 28 days
Method of measurement
Observation

Intervention groups

1

Description
Intervention group: 40 eligible patients with severe COVID-19 in a 1:1 ratio: (20 intubated and 20 non-intubated)hemoperfusion + Standard of care treatment
Category
Treatment - Devices
