Effects of TMJ exercises on pain, range of motion and functional disability in patient with non-specific neck pain.

Protocol summary

Study aim

To compare the effects of Effects of TMJ exercises on pain, range of motion and functional disability in patient with non-specific neck pain.

Design

Parallel group, single-blinded, randomized controlled trial

Settings and conduct

OPD Physiotherapy department university of Lahore, Lahore

Participants/Inclusion and exclusion criteria

Inclusion Criteria:- age of 18-55 years old, and with primary complaints of NSNP (symptoms lasting for at least 3 months), one of the four signs of TMD (joint sounds, deviation during mouth opening, muscle pain at a minimum of two tender points in the temporalis or masseter muscles and pain during mouth opening), Both male and female patients, Exclusion Criteria:- acute muscle trauma, received physiotherapy during the previous 3 months, unilateral and bilateral upper extremity symptoms, any neurological disorders, Musculoskeletal systemic disease, serious spinal pathology.

Intervention groups

All person who came to physiotherapy department OPD, university of Lahore was consider and assess for NSNP. 50 patients were randomly apportioned into 2 groups, 25 patients in each group. Gathering A patient were dealt with routine physiotherapy while Group B patients were treated with jaw activities and routine physiotherapy. Randomization of patients into groups were finished by mean of lottery strategy. Plan of the investigation was single blinded RCT. In which patients was kept blind. Furthermore, in this investigation patients were kept visor.

Main outcome variables

- Pain, ROM, Functional Activity

Scientific title

Effects of TMJ exercises on pain, range of motion and functional disability in patient with non-specific neck pain.

Public title

Effects of TMJ exercises on pain, range of motion and functional disability in patient with non-specific neck pain.

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Age of 18-55 years old With primary complaints of NSNP (symptoms lasting for at least 3 months) One of the four signs of TMD (joint sounds, deviation during mouth opening, muscle pain at a minimum of two tender points in the temporalis or masseter muscles and pain during mouth opening). Both male and female patients The severity of pain should be adequate (on a numerical pain rating scale it should be higher than 2 out of 10) for approving a clinically beneficial effect to be exhibited

Exclusion criteria:

Acute muscle trauma, Received physiotherapy during the previous 3 months Unilateral and bilateral upper extremity symptoms Any neurological disorders. Musculoskeletal systemic disease Serious spinal pathology Thoracic outlet syndrome Cervical rib Cervicogenic headache and vertigo. The previous history of whiplash trauma, prior to 6 weeks of inspection .Patients with h/o fractures of cervical or thoracic spine Any former h/o cervico-thoracic surgery

Age

From **18 years** old to **55 years** old

Gender

Both

Phase

N/A

Groups that have been masked

- Participant

Sample size

Target sample size: **50**

More than 1 sample in each individual

Number of samples in each individual: **2**

25 patients will be in each group, estimated by using 5% level of significance, 90% power of test

Actual sample size reached: **50**

More than 1 sample in each individual

Actual sample size in each individual: **2**

25 patients will be in each group, estimated by using 5% level of significance, 90% power of test

Randomization (investigator's opinion)

Randomized

Randomization description

All the participants who will come to the physiotherapy department will be considered and screen for nonspecific neck pain. 50 patients will be allotted in two groups i.e.; group A(routine physiotherapy) and group B(TMJ exercise+ routine physiotherapy) via lottery method, 25 in each group. patients with having lottery number with group A treated with just baseline treatment of

physiotherapy, and patient having lottery method with Group B managed with baseline treatment and also receive a additional technique that was TMJ exercise.

Blinding (investigator's opinion)

Single blinded

Blinding description

it will be a single-blind study in which participant/ patients will be kept blind for treatment technique. 2 different technique will be provided to patients. and they will blind about that which technique will be given to which patients.
