Effects of Sciatic Nerve Mobilization versus Conventional physiotherapy Treatment in Patients with Lumbar Radicular Pain” A Randomized Control Trial

Protocol summary

Study aim

To determine the effect of sciatic nerve mobilization in the management of patients with lumbar radicular pain.

Design

Single blind, Single Centre, parallel assignment
Randomized Controlled Trial.

Settings and conduct

The study was conducted at out Patient Physiotherapy Department of Syeda Khatoon-e-Jannat Trust Hospital Faisalabad. only outcome assessor was blind in this study.

Participants/Inclusion and exclusion criteria

Patients with Age 25 -55 years from both genders with Positive Laseague sign or straight leg raise test, Unilateral leg pain radiation and more than 2 month's history were included, while patients with Infection -Tuberculosis, Inflammation around the lumbar spine, Tumors around the back, Lumbar instability/ Subluxation/ Fracture/ Spondylolisthesis, Osteoporosis, Joint hyper mobility, any red flag signs and Inability to comply with the study protocol due to cognitive impairment were excluded from study.

Intervention groups

Those patient who met eligibility criteria, were randomly allocated into two groups by using lottery method: Group A and Group B. Group A: Experimental Group consisting of 40 patients. They performed 2 sets of 10 repetitions of each exercise 3 times/week for 2 weeks. Sciatic nerve mobilization was applied in appropriate position as per standard procedure. Group B: Control Group contained 40 patients and was administered conventional physiotherapy treatment only.

Main outcome variables

Pain measured by numeric pain rating scale (NPRS), Modified Oswestry Disability Index and ROM by Inclinator.

Scientific title

Effects of Sciatic Nerve Mobilization versus Conventional physiotherapy Treatment in Patients with Lumbar Radicular Pain” A Randomized Control Trial

Public title

Sciatic Nerve Mobilization in Lumbar Radicular Pain.

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Age: 25 -55 years Both genders Positive Lasegue Sign Pain radiation to Unilateral limb. Pain Since more than 2 months.

Exclusion criteria:

Age less than 22 or more than 55 years. Presence of any Red Flag signs. Infection -Tuberculosis. Lumbar Instability/ subluxation/ Fracture/ spondylolisthesis Joint Hyper mobility. Inability to comply with the study protocol due to cognitive impairment Osteoporosis. Tumors around the back Inflammation around the lumbar spine.

Age

From **22 years** old to **55 years** old

Gender

Both

Phase

N/A

Randomization (investigator's opinion)

Randomized

Randomization description

The patients who met eligibility criteria's and signed the informed consent document were enrolled in the study. They were divided into two groups by using lottery method. Chits were prepared equal to total sample size, odd Numbers were allocated to Group A and even number were allocated to Group B. Each patient was requested to draw a chit from the box and after that patients were recruited into either Group A or Group B.

Blinding (investigator's opinion)

Single blinded

Blinding description

Data safety was ensured by assigning Specific Identity numbers and all consent forms, data collection charts were placed in locker to blind Assessors

Placebo

Not used

Health conditions studied

1

Description of health condition studied

Normal Healthy Individuals with Lumber radicular Pain. The compression of any of the lumber nerve route can results in severe radicular pain. The onset of pain may begin suddenly or gradually after injury. The pain pattern is usually radicular with a sharp, shooting pain running down the lower back, buttocks and down the thigh along with numbness or tingling sensations. The pain is aggravated by prolonged sitting, standing, forward bending or twisting movements and is relieved by walking, lying down, rest and a recumbent position.

ICD-10 code

Radiculopa

ICD-10 code description

M54.16

Primary outcomes

1

Description

Pain

Timepoint

Before 1st session and after last session.

Method of measurement

pain will be measured using numeric pain rating scale subjectively.

2

Description

Functional disability

Timepoint

Before 1st session and after last session.

Method of measurement

Measured subjectively using Modified Oswestry Disability

Index.

3

Description

Range of Motion-Straight Leg Raise (SLR)

Timepoint

Before 1st session and after last session.

Method of measurement

measured using Standard Goniometer

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Group-A In the beginning patients were given conventional baseline treatment according to North American spine society clinical guidelines and Sciatic nerve mobilization was added as an intervention. Sciatic nerve mobilization techniques were given in the form of 3 sets of 10 oscillatory movements at the ankle that were rhythmic ankle dorsiflexion and plantarflexion with a gap of 10 seconds between each set for 3 times a week for 2 weeks on alternate days.

Category

Treatment - Other

2

Description

Group B: Control group. Patients were given only conventional baseline treatment according to North American spine society clinical guidelines. It included moist hot pack for 15 minutes in prone lying position, and supervised back strengthening exercises consisting of pelvic tilts, bridging, quadruped alternate arm and leg activities, abdominal bracing exercises. Patients were asked to perform 2 sets of 10 repetitions of each exercise 3 times a week for 2 weeks on alternate days.

Title and more details about the data/document

Effects of Sciatic Nerve Mobilization versus Conventional physiotherapy Treatment in Patients with Lumbar Radicular Pain" A Randomized Control Trial. Consent form, Clinical Study Report, Statistical Plan files can be shared.

When the data will become available and for how long

after Publication for one year

To whom data/document is available

People working in academic institutions or people working in businesses can also contact Principal Investigator to receive it.

Under which criteria data/document could be used

the data can be included in meta analysis and systematic reviews. Person responsible for scientific inquiry will cater the other requests personally, review them on predefined criteria and respond accordingly.

From where data/document is obtainable

zainab.48@hotmail.com

What processes are involved for a request to access data/document

by formal email request Full description about the purpose/aim of using the documents, Insight about the disorder and Intervention of the research can be obtained.
