

Clinical Trial Protocol

Iranian Registry of Clinical Trials

09 Jun 2026

Compilation Of Effectiveness of Compassionate Mind-Based Cognitive Therapy and Transcranial Direct Electrical Stimulation on Brain-Behavioral Systems, Dark Personality Traits, and the Theory of mind Adolescents with high-risk behaviors.

Protocol summary

Registration timing: **retrospective**

Study aim

Comparison of the effectiveness of cognitive therapy based on compassionate mind and direct transcranial electrical stimulation on brain-behavioral systems, dark personality traits and mind theory of adolescents with high-risk behaviors

Last update: **2021-01-25, 1399/11/06**

Update count: **0**

Registration date

2021-01-25, 1399/11/06

Design

The present research method was a quasi-experimental and comparative experiment in which a pre-test/post-test design with two experimental groups and one control group was used.

Settings and conduct

This study was performed in Bozorgmehr Counseling Center.

Recruitment status

Recruitment complete

Funding source

Participants/Inclusion and exclusion criteria

Inclusion criteria: having a high-risk behaviors; willingness to participate in the study; not suffering from other disorders. Non-inclusion criteria: Participate in other intervention programs at the same time.

Expected recruitment start date

2020-09-22, 1399/07/01

Expected recruitment end date

2020-12-30, 1399/10/10

Actual recruitment start date

2020-11-30, 1399/09/10

Actual recruitment end date

2021-01-16, 1399/10/27

Trial completion date

2021-01-17, 1399/10/28

Intervention groups

The first intervention group was exposed to direct ultrasonic electrical stimulation, and the second experimental group was exposed to Compassionate Mind-Based Cognitive Therapy. The control group did not receive any treatment.

Main outcome variables

Brain-Behavioral Systems, Dark Personality Traits, and the Theory of Mind

Scientific title

Compilation Of Effectiveness of Compassionate Mind-Based Cognitive Therapy and Transcranial Direct Electrical Stimulation on Brain-Behavioral Systems, Dark Personality Traits, and the Theory of mind Adolescents

with high-risk behaviors.

Public title

Mind-Based Cognitive Therapy and Transcranial Direct Electrical Stimulation on Brain-Behavioral Systems, Dark Personality Traits, and the Theory of mind Adolescents with high-risk behaviors and self-harm behaviors.

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Having high-risk behaviors based on a screening questionnaire Willingness to participate in the study No other mental disorders

Exclusion criteria:

Participate in other intervention programs at the same time

Age

From **15 years** old to **17 years** old

Gender

Male

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **45**

Actual sample size reached: **45**

Randomization (investigator's opinion)

Randomized

Randomization description

36 students with high-risk behaviors were randomly selected and then completely randomly (based on lottery) were divided two groups of 15 experiments and one group controls. Allocation was done through drawing a code in which every student was given a code and we put the codes in a container. Then 15 people who were taken out first were replaced in the first experimental group, 15 people later in the second experimental group and 18 people later in the control group.

Intervention groups**1****Description**

Intervention group: Intervention group: Transcranial Direct-Current Stimulation (tDCS) is a technique used to

modify and modify brain function, which is now used as a healthy and effective procedure to treat most neurological conditions and even in medicine. Electrical Stimulation Technique A neural modification method that transmits electric current to a specific point in the skull over a very specific period of time, including an anode electrode that stimulates the nervous system and a cathode electrode that inhibits the nervous system. To stimulate the centers of the prefrontal cortex, this is responsible for controlling the complex movements of the anode electrode on the prefrontal cortex and the cathode electrode on the opposite shoulder (according to the 10-20 EEG system). Participants sit in a comfortable chair in a quiet room with no other sensory stimuli. Electrical stimulation of the brain by tDCS (Canadian-made Mind-Alif brand device) was instilled in students in a steady stream with a constant current of between 1.5 and 2 mA (intensity appropriate for client tolerance). Every other day and for 10 days, using a pair of 5×5 cm rubber electrodes covered with artificial sponge soaked in a normal saline solution and placed in the desired areas.

3

Description

Intervention group: Cognitive therapy based on a compassionate mind: Compassionate mind training is one of the psychotherapy methods in which empathy, empathy, compassion, acceptance and tolerance, responsibility and a sense of worth are taught (Gilbert, 2009). This treatment is designed by the research activities of Gilbert (2005). In the present study, this treatment method will be held in 12 sessions, each session for 90 minutes and in groups once a week.
