The effect of combination of extracorporeal shock wave therapy (ESWT) and muscle energy technique (MET) on active trigger point in upper trapezius muscle

Protocol summary

Study aim

the effectiveness of combination of extracorporeal shock wave therapy and muscle energy technique on active trigger points in upper trapezius muscle.

Design

54 participants will be divided in three groups, randomly. Randomization will be performed using sealed, filled envelopes describing the treatment groups. We prepare three envelopes, in each of which one of the three methods is written. Each participant will choose one of the envelopes and will be divided in each treatment group.

Settings and conduct

The patients with active upper trapezius trigger points in the physiotherapy clinic of school of Rehabilitation will be evaluated and will be divided in three groups. Group A will receive only MET while group B will receive only ESWT and group C will receive combination of MET and ESWT. In the end of treatment sessions, evaluations will be done, again.

Participants/Inclusion and exclusion criteria

Inclusion criteria: - Age between 18-40 years. - Presence of a palpable taut band in upper trapezius muscle. - Presence of a nodule in upper trapezius muscle. - Presence of 1 to 3 trigger points in one side. - Iron or calcium deficiency
Exclusion criteria: - Diagnosed fibromyalgia - Cervical radiculopathy - Facial neuralgia - Coagulation alteration - Cancer - History of cervical or shoulder surgery - History of deep vein thrombosis - History of myopathy - Aspirin intake during the last 3 days

Intervention groups

1. Group A- treatment with only MET . 2. Group B - treatment with only ESWT . 3. Group C - treatment with combination of MET and ESWT .

Main outcome variables

• Visual analog scale VAS. • pain pressure threshold • neck range of motion • Neck disability index (NDI)

Scientific title

The effect of combination of extracorporeal shock wave therapy (ESWT) and muscle energy technique (MET) on active trigger point in upper trapezius muscle

Public title

The effect of combination of shock wave therapy and muscle energy technique on neck pain

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Age between 18-40 years. Presence of a palpable taut band in upper trapezius muscle. Presence of a nodule in upper trapezius muscle. Presence of 1 to 3 trigger point in one side.

Exclusion criteria:

Diagnosed fibromyalgia Cervical radiculopathy Facial neuralgia History of cervical or shoulder surgery History of deep vein thrombosis History of myopathy

Age

From **18 years** old to **40 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **54**

Randomization (investigator's opinion)

Randomized

Randomization description

The patients will randomly assign into 3 groups of only MET , only ESWT and combination of MET and ESWT . Randomization will performed using sealed, randomly filled envelopes describing the treatment groups. We prepare three envelopes, in each of which one of the three methods is written.

Health conditions studied

1

Description of health condition studied

Activetrigger points in upper trapezuis muscle

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

•Pain

Timepoint

before and after 1 week of intervention

Method of measurement

• visual analog scale

2

Description

Pain pressure threshold

Timepoint

before and after 1 week of intervention

Method of measurement

Algometer

3

Description

• Active neck range of motion

Timepoint

before and after 1 week of intervention

Method of measurement

Digital goniometer

4

Description

neck function

Timepoint

before and after 1 week of intervention

Method of measurement

neck disability index questionnaire (NDI)

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group A- only Muscle energy techniques- in this group muscle energy technique will apply on the upper trapezius. First upper trapezius will put in stretch position and then its antagonist muscle is down 10 seconds isometric contraction.after 20 seconds relaxation,upper trapezius will be stretched again. This technique will do 3 times in 3 sessions.

Category

Rehabilitation

2

Description

Intervention group B: only shock wave- shock wave prob will put on active trigger points of the upper trapezius and mechanical stimulation with 2000 Bar pressure will apply for one minutes. his technique will do 3 times in 3 sessions.

Category

Rehabilitation

3

Description

Intervention group C: Combination of Muscle energy techniques and shock wave- Muscle energy technique will apply on the upper trapezius. First upper trapezius will put in stretch position and then its antagonist muscle is down 10 seconds isometric contraction.after 20 seconds relaxation,upper trapezius will be stretched again. Then shock wave prob will put on active trigger points of the upper trapezius and mechanical stimulation with 2000 Bar pressure will apply for one minutes.This technique will do 3 times in 3 sessions.
