

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

The Comparative Study on Outcome of septoplasty with and without unilateral Pyriform Turbinoplasty on concave side of septum in patients with septal deviation treated

Protocol summary

Study aim

Evaluation of both septoplasty alone and septoplasty with resect preform aperture in concave part and selecting a more suitable method for patients with nasal obstruction

Design

The study is performed in a double blind method with randomization. The studied groups are two groups of case and control. The number of samples is statistically estimated to be 60 people who are divided into 2 parallel groups of 30 people and are randomly intervened

Settings and conduct

This study is a double-blind clinical trial in patients with nasal deviation referred to Taleghani Hospital. Septoplasty is performed for all patients, but for some patients it is performed as a random septoplasty with one-sided turbinoplasty preform on the concave side

Participants/Inclusion and exclusion criteria

Admission: Patients over 18 years of age with a diagnosis of nasal deviation who need septoplasty based on history and examination without surgery and without underlying disease: diabetes, thyroid disorders, asthma, polyposis, vasculitis and rheumatic diseases Exit: no follow-up - characterized by associated disease

Intervention groups

Patients over 18 years of age with a diagnosis of nasal deviation who require septoplasty based on history and examination and undergo septoplasty and preform aperture resection. In the control group, only septoplasty surgery is performed

Main outcome variables

In this study headache; Age; sex; nasal congestion; airflow; degree of nasal deviation; duration of nasal obstruction; A history of allergic rhinitis is examined

Scientific title

The Comparative Study on Outcome of septoplasty with and without unilateral Piriform Turbinoplasty on concave side of septum in patients with septal deviation treated

Public title

The Comparative Study on Outcome of septoplasty with and without unilateral Piriform Turbinoplasty on concave side of septum in patients with septal deviation treated

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Patient over 18 years old need Septoplasty : septal deviation Diagnosed according to History and Examination Without prior Septoplasty surgery Without comorbidity such as : Diabetes mellitus. Thyroid disorder. Asthma. Polyposis . Tomato logic and Vasculitis Disorder

Exclusion criteria:

Miss follow up Diagnosed Comorbidity

Age

From **18 years** old

Gender

Both

Phase

3

Groups that have been masked

- Investigator

Sample size

Target sample size: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

Block Randomization : 4 groups divided into A to C that were randomly selected from each group that septoplasty is performed randomly with concave turbinoplasty intervention or septoplasty alone. Finally in 60 samples; 30 septoplasty alone and 30 septoplasty and perform Convex turbinoplasty is performed

Blinding (investigator's opinion)

Double blinded

Blinding description

Patients know they need Septoplasty with or without piriform aperture Turbinoplasty. The surgeon describes every kind of surgery. At the end patients and researcher don't know which one done for them.

Health conditions studied

1

Description of health condition studied

Septal Deviation

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Nasal obstruction is the main variable of the study and 60 samples are needed to evaluate the effect of the intervention

Timepoint

Nasal obstruction is examined before the intervention and 2 months and 6 months after surgery

Method of measurement

It is examined by rhinomanometric device

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Patients undergoing septoplasty surgery with piriform aperture resect.

Category

Treatment - Surgery

2

Description

Control group: Patients undergoing only septoplasty .

Category

Treatment - Surgery

Title and more details about the data/document

Manometric data and patients' questionnaires can be shared after being unidentified

When the data will become available and for how long

3 months after printing the results

To whom data/document is available

Researchers in academic institutions

Under which criteria data/document could be used

The data obtained from the questionnaire and manometry can be presented for further studies

From where data/document is obtainable

Applicants should send a request letter to the researcher's email to access the data.
mansurzade.homeira@gmail.com

What processes are involved for a request to access data/document

The applicant will apply to the mentioned e-mail by introducing himself / herself and the relevant university and the published data will be provided within two weeks
