

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Evaluation of clinical course and disease consequences with or without Remdesivir intake in patients with COVID-19 infection

Protocol summary

Study aim

Comparison of clinical symptoms of patients with Covid 19 in the studied groups Comparison of disease severity and status in patients with Covid 19 in the study groups Comparison of clinical improvement and mortality in patients with Covid 19 in the study groups Comparison of oxygen saturation levels and body temperature in patients with Covid 19 in the study groups Comparison of laboratory findings in patients with Covid 19 in each of the studied groups Determining the relationship between disease severity and clinical status in patients receiving Remdesivir with the interval between the onset of symptoms and the start of treatment with Remdesivir

Design

Nonequivalence group divided trial with 100 patients.

Settings and conduct

The study will be performed in Hajar Hospital in Shahrekord and with following and completing a checklist of clinical and laboratory symptoms.

Participants/Inclusion and exclusion criteria

1.patients aged ≥ 18 years old 2. SARS-CoV-2 infection confirmed by molecular test and including 1.blood oxygen saturation $\leq 93\%$ in room air, or patients in need of supportive oxygen or ventilation or 2.patients with pulmonary infiltration in radiological studies enrolled in the study. Excluding criteria: 1.Alanine aminotransferase and Aspartate aminotransferase rising more than 5 times the upper limit of normal 2.Glomerular filtration rate less than 60ml/minute(according to Cockcroft-Gault formula)

Intervention groups

1. Patients receiving Remdesivir+ standard care 2. Patients receiving standard care

Main outcome variables

Clinical symptoms, laboratory symptoms, mortality rate, hospitalization period, ICU admission

Scientific title

Evaluation of clinical course and disease consequences with or without Remdesivir intake in patients with COVID-19 infection

Public title

Effect of Remdesivir in treatment of COVID-19

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Blood oxygen saturation < 93% in room air or patients with patients in need of supportive oxygen or ventilation or Patients with pulmonary infiltration in radiological studies

Exclusion criteria:

Alanine aminotransferase and Aspartate aminotransferase rising more than 5 times the upper limit of normal Glomerular filtration rate less than 30ml/minute (according to Cockcroft-Gault formula)

Age

From **18 years** old

Gender

Both

Phase

Not used

Assignment

Other

Other design features

Due to the limit in access to Remdesivir, the study is conducted as a Nonequivalence group. Patients hospitalized in drug availability courses were eligible to receive the drug to comply with ethical principles, and patients admitted in other courses received only standard treatments.

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Patients will receive Remdesivir and standard care. this group will receive 200 mg of Remdesivir IV for first day and 100 mg daily for 4 days plus standard care according to national protocol .

Category

Treatment - Drugs

2

Description

Control group: Patients only receiving standard care according to national protocol with suggested dose and duration and do not receive Remdesivir.

Category

Treatment - Drugs
