Comparison of the effect of lumbopelvic manipulation, with lumbopelvic manipulation and dry needling of quadratus lumborum and Gluteus Medius muscles on pain and function of athletes knee with patellofemoral pain syndrome (PFPS)

Protocol summary

Study aim

Comparison of the effect of lumbopelvic manipulation, with lumbopelvic manipulation and dry needling of quadratus lumborum and Gluteus Medius muscles on pain and function of athletes knee with patellofemoral pain syndrome (PFPS)

Design

Clinical trial with two comparison groups, with parallel groups, one-way blind, randomized, sample size of 30 people, blocked randomization

Settings and conduct

The two groups of lumbopelvic manipulation and lumbopelvic manipulation and dry needle of the quadratus lumborum and gluteus medius muscles are performed in Shiraz Rehabilitation School. And evaluation in the first and last session of treatment by the evaluator who is blind to the patients

Participants/Inclusion and exclusion criteria

Entry requirements : .Athletes 18 to 45 years of age with unilateral patellar pain syndrome who exercise regularly (at least 3 sessions per week). .Complaints of anterior knee pain in at least 2 of the following daily activities: sitting for long periods of time, going up and down stairs, squatting, kneeling, jumping and running. .Report of pain when touching the internal and external patellar procedures , Kujala score less than 40 out of 80 .Having at least 3 out of 10 pain levels on a numerical pain scale over the past week No entry conditions: .Existence of other pathologies of the knee joint such as rupture of meniscus or knee ligaments, wear and tear of the knee joint, tendon problems, dislocation or partial dislocation of the patella .Hip pathologies .Radicular pain in the lumbar region and neurological symptoms .Previous knee surgery .Contraindications to the use of dry needles

Intervention groups

lumbopelvic manipulation lumbopelvic manipulation and dry needling of quadratus lumborum and Gluteus Medius muscles on pain and function of athletes knee with patellofemoral pain syndrome (PFPS)

Main outcome variables

Intensity of pain ; Functional ability

Scientific title

Comparison of the effect of lumbopelvic manipulation, with lumbopelvic manipulation and dry needling of quadratus lumborum and Gluteus Medius muscles on pain and function of athletes knee with patellofemoral pain syndrome (PFPS)

Public title

Comparison of the effect of lumbopelvic manipulation, with lumbopelvic manipulation and dry needling of quadratus lumborum and Gluteus Medius muscles on pain and function of athletes knee with patellofemoral pain syndrome (PFPS)

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Athlete 18 to 45 years old with patellofemoral pain syndrome who exercise regularly (at least three times per week) Complain of anterior knee pain at least in 2 of the following activity: sitting for long periods of time, going up and down stairs, squatting, kneeling, jumping and running Pain report when touching internal and external of patella surface and positive clark test in knee extended and sitting At least be positive result of one of the three following tests: Positive vastus medialis co-ordination test Positive 20 cm going down stair test Positive Patellar apprehension test Gradual start of symptoms without history of trauma or injury for at least past 3 months kujala score level 40 to 70 At least 3 out of 10 score level of NPRS in past tree weeks

Exclusion criteria:

Existence of other pathologies of knee joint such as rupture of meniscus or knee ligaments, knee joint wear, tendon problems, patellar dislocation or partial dislocation, Sinding-Larsen disease, Osgood-Schlatter disease and Plica syndrome, ankle and knee injuries. Pathologies of the hip such as rupture of the ligaments of the thigh, joint wear and tear, tendon problems, dislocation or partial dislocation and injury of the thigh. Structural and biomechanical problems such as: valgus and varus in the knee or femoral anterior Radicular pain in the lumbar region and neurological symptoms (diagnosis with the help of history and lower limb percussion test, dural stretch test) Previous knee surgery Neurological disorders affecting balance Contraindications to using dry needles such as: Existence of metabolic diseases including diabetes, rheumatic diseases To. Pregnancy. Respiratory and cardiovascular problems (Peripheral vascular disease), cancer and any malignancy. Immune system defects. Menstruation. Needle phobia. Bleeding disorders and taking anticoagulants. Liver and kidney diseases

Sample size

Target sample size: **30**

Randomization (investigator's opinion)

Randomized

Randomization description

blocked randomization In this way, we placed 30 cases in blocks and 4-person cases Each block is randomly assigned to the control and intervention group

Blinding (investigator's opinion)

Single blinded

Blinding description

At the beginning of the treatment and at the end of the treatment, she is kept blind. At the beginning, the evaluation is done and at the end, the final evaluation and data recording is done. Initially, the case is studied in an intervention or control group and the therapist performs treatment for each case depending on whether it is control or intervention, but the evaluator is blind at the beginning of the pre-treatment and post-treatment evaluation and not know about the treatment is performed. And the case of treatment

Health conditions studied

1

Description of health condition studied

patella femoral pain syndrom(pfps)

ICD-10 code

M22.2

ICD-10 code description

Patellofemoral disorders

Primary outcomes

1

Description

pain score

Timepoint

At the beginning of the study (before the intervention) and sessions 4 and 1 month later

Method of measurement

Numeric Pain Rating Scale

Secondary outcomes

1

Description

Functional ability

Timepoint

At the beginning of the study (before the intervention) and sessions 4 and 1 month later

Method of measurement

Kojala Questionnaire

2

Description

Functional ability

Timepoint

At the beginning of the study (before the intervention) and sessions 4 and 1 month later

Method of measurement

Lateral plank duration

Intervention groups

1

Description

Control group: lumbopelvic manipulation(In this group, only lumbar-pelvic placment is performed, in which the person is placed in a special position and the technique is performed)

Category

Rehabilitation

2

Description

Intervention group: lumbopelvic manipulation and dry needling of quadratus lumbarom and Gluteus Medius

muscles.(In this group, in addition to pelvic lumbar placement in the said muscles, the dry needle technique is also applied)
