Iranian Registry of Clinical Trials

13 Jun 2026

The Effect of Hip Abductor Exercises on Pain, Function and Balance Parameters in Patients with Knee Osteoarthritis

Protocol summary

Study aim

Determining the effect of hip abductor exercises on pain, function and balance parameters in patients with knee osteoarthritis

Design

The study is a randomized controlled double-blind clinical trial. In this study, patients will divide into two groups of intervention and control by permuted block stratified randomization.

Settings and conduct

Razmjo Moghadam Physiotherapy Clinic Zahedan Islamic Republic of Iran

Participants/Inclusion and exclusion criteria

Inclusion criteria: age between 40 to 70 years; patients with osteoarthritis of the knee with chronic knee pain for 6 months or more; having grade 2 or 3 osteoarthritis of the knee according to the Kellgren-Lawrence grade; no history of knee surgery and no history of intra-articular injection and physiotherapy in the last 6 months; no more severe radiographic signs of the knee joint in the lateral side than in the medial side; no history of osteoarthritis or trauma or pathological lesion in the Hip joint ;no history of musculoskeletal, articular, neurological disorders affecting balance. Exclusion criteria: receiving other therapeutic interventions during the study, unwillingness to continue treatment, exacerbation of the patient's symptoms.

Intervention groups

Control group: Routine physiotherapy treatments, general exercises, progressive quadriceps strengthening program Intervention group: Routine physiotherapy treatments, general exercises, progressive quadriceps and hip abductor muscles

Main outcome variables

Pain; function; balance

Sample size

Target sample size: **36**

Randomization (investigator's opinion)

Randomized

Randomization description

Random allocation of patients to the two groups is done by permuted block stratified randomization. First, eligible patients are classified according to age, sex and BMI, respectively. Then, based on 4 blocks (consisting of two groups A (intervention) and B (control) and two replicates for each), which were randomly selected from all possible modes of permutations; They are assigned to the desired group. These blocks were created using R statistical software version 4.0.2.

Blinding (investigator's opinion)

Double blinded

Blinding description

Patients with osteoarthritis of the knee and responsible for data collection and statistical data analysis are kept blind

Placebo

Title and more details about the data/document

All of the data can be shared.

When the data will become available and for how long

One year after article publication

To whom data/document is available

Researchers working in academic and scientific institutions

Under which criteria data/document could be used

Researchers and specialists in this field It must be ensured that data will not be misused

From where data/document is obtainable

ahmadaskary@gmail.com rakhshanim500@gmail.com

What processes are involved for a request to access data/document

The applicant must and clearly and concisely state his / her intention to apply. He will receive the data as soon as possible after verification
