

Clinical Trial Protocol

Iranian Registry of Clinical Trials

27 Jul 2026

Effects of home based aerobic exercises on cardiorespiratory fitness, Heart rate and Rating of perceive exertion in university students.

Protocol summary

Study aim

To investigate the impact of lifestyle components on cardiorespiratory fitness heart rate and Rating of perceive exertion by performing 6 weeks of moderate intensity exercise in estimating change in VO2 max by performing Harvard bench step test after 6 weeks of exercise program.

Design

STUDY DESIGN: Quasi-Experimental study DURATION OF STUDY: 6 months SAMPLE SIZE: =34

Settings and conduct

SETTING: University of Sialkot students.

Participants/Inclusion and exclusion criteria

Inclusion Criteria: • university students • Age between 18-35 years Exclusion criteria • Above the age of 35 • Participant who failed to complete life style questionnaire • Participants failed to complete the fitness test • Participant who have congenital heart disease, hypertension, type I diabetes and known kidney disease will be excluded from the study. • Participants with known past surgical history'

Intervention groups

1. Information pertaining to individual demographics and lifestyle components will be collected through pre exercise questionnaire. 2. After completing the questionnaire Harvard bench step cardiorespiratory fitness test will be performed. In this test Participants step up and down, on and off an aerobics type step for THREE minutes to increase heart rate and Oxygen consumption 3. After performing test HR, RPE and VO2 max will be calculated. 4. Consequently participants will be instructed to participate in moderate intensity exercise for 6 weeks. 6 weeks later participants again perform bench step and calculate the HR, RPE and VO2 max.

Main outcome variables

To see the effects of 6 weeks of aerobic exercise on Heart rate , cardiorespiratory fitness and rating of perceive exertion in students.

Scientific title

Effects of home based aerobic exercises on cardiorespiratory fitness, Heart rate and Rating of perceive exertion in university students.

Public title

Effects of home based aerobic exercises on cardiorespiratory fitness, Heart rate and Rating of perceive exertion in university students.

Purpose

Health service research

Inclusion/Exclusion criteria**Inclusion criteria:**

The study included apparantly healthy male and female subjects between age group 18 to 35 years. Male and female of university students.

Exclusion criteria:

Above the age 35 years. Participants who failed to complete life style questionnaire. Participants failed to complete fitness test. Participants who have congenital heart disease, hypertension, type I diabetes and known kidney disease will be excluded from the study. Participants with known surgical history. Students on any medications.
