

Clinical Trial Protocol

Iranian Registry of Clinical Trials

27 Jun 2026

Investigating the effect of almond porridge, grape extract, and pea syrup on reduction of recovering period in patients with Covid-19

Protocol summary

Study aim

The effect of almond porridge, grape juice and chickpea juice on weakness and duration of hospitalization and clinical symptoms due to covid 19

Design

This is a single-center double-blind, placebo-controlled randomized trial with 160 (80 in each group) participants.

Settings and conduct

patients with Covid-19 that are hospitalized at AJA hospital will be randomized into treatment and placebo groups and will be assessed at baseline and 3-months and 6-months visits. The primary investigator of the study, who will not be involved in diagnosis and follow-up, will carry out the randomization and allocation using permuted block randomization with blocks of size 4. Treatment allocations will be concealed using opaque envelopes.

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1) age between 18 and 65 years 2) Positive PCR test and lung involvement on CXR and positive clinical signs 3) Candidate for inpatient treatment Exclusion criteria: 1) Respiratory distress 2) Hospitalization in the intensive care unit or tracheal intubation

Intervention groups

Both study and control groups will receive the same food and covid-19 treatments (standard hospital regimen). During the hospital stay, in addition to the standard hospital regimen, we give the patient a mixture of almond porridge and grape juice between meals at 10 o'clock during the hospital stay. We also give chickpea juice to the patient in the 4 o'clock snack.

Main outcome variables

Hospital stay The Fatigue Assessment Scale (FAS) for the assessment of fatigue severity SF-36 questionnaire for the assessment of the quality of life

Scientific title

Investigating the effect of almond porridge, grape extract, and pea syrup on reduction of recovering period in patients with Covid-19

Public title

Almond porridge, grape extract, and pea syrup for treatment of Covid-19

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Age between 18 and 65 years Conscious consent to participate in the study positive PCR test and lung involvement on CT scan and positive clinical signs including fever greater than 38 degrees or hot flashes with at least one of the symptoms of dry cough, 24 Respiratory rate per minute, headache or body aches, weakness and lethargy, anosmia (olfactory disorder) or taste disturbances and anorexia Absence of respiratory distress Candidates for hospitalization

Exclusion criteria:

admission to the intensive care unit patients with intubation

Age

From **18 years** old to **65 years** old

Gender

Both

Phase

3

Groups that have been masked

- Participant
- Care provider
- Investigator
- Outcome assessor
- Data analyser

Sample size

Target sample size: **160**

Randomization (investigator's opinion)

Randomized

Randomization description

Patients will be equally randomized into treatment or control groups in a 1:1 ratio. A specific random code will be assigned to each patient using the Microsoft Office Excel software. The primary investigator of the study, who will not be involved in diagnosis and follow-up, will carry out the randomization and allocation using permuted block randomization with blocks of size 4. Treatment allocations will be concealed using opaque envelopes.

Blinding (investigator's opinion)

Double blinded

Blinding description

The allocations will be kept in confidential and opaque envelopes and will be exposed at the end of the trial. Placebo will be completely indistinguishable from treatment. Randomizations, drug administration, rating, data entry, and statistical analyses will be conducted by separate individuals that are blinded to drug allocations.

Health conditions studied

1

Description of health condition studied

COVID-19

ICD-10 code

U07.1

ICD-10 code description

COVID-19, virus identified

Primary outcomes

1

Description

The Fatigue Assessment Scale (FAS) score

Timepoint

0, 3, 6 months after treatment

Method of measurement

The Fatigue Assessment Scale (FAS)

2

Description

hospital stay

Timepoint

after the initiation of treatment till discharge from hospital

Method of measurement

health records

Secondary outcomes

1

Description

ESR, CRP

Timepoint

during admission

Method of measurement

laboratory measurement using electroimmunoassay (EIA)

Intervention groups

1

Description

Intervention group: A mixture of almond porridge and grape juice (containing 25 grams of almonds and 8 cc of grape juice) is given to the patient in a disposable container in the snack at 10 o'clock and given to the patient during the hospital stay. Also in the snack at 16 o'clock, chickpeas (containing 30 grams of chickpeas) will be given in a disposable container during the hospital stay.

Category

Treatment - Drugs

2

Description

The placebo will be similar to the intervention in terms of shape, taste, color and smell and will be given to the patient at 10 and 16 o'clock.
