

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Comparison the effect of neck stabilization exercises with and without thoracic mobility exercises on neck pain, range of motion, muscle endurance, proprioception and posture in women with chronic neck pain and forward head posture

Protocol summary

Study aim

Comparing the effects of neck stabilization exercises with and without thoracic mobility exercises on pain, range of motion, muscle endurance, neck proprioception and posture of women with chronic neck pain and head forward

Design

The sample size was done using G-POWER software, randomization was done with the random block method 1 at a ratio of 1:1, the current semi-experimental research of three groups, one blind strain, with a pre-test AND post-test research design with two intervention groups And a control group was done.

Settings and conduct

It was done as a single blind test in the sports club for 8 weeks.

Participants/Inclusion and exclusion criteria

Women 25 to 50 years old; People with non-specific chronic neck pain who have neck pain continuously for at least three months; In terms of the amount of pain, getting a rank between 3-7 in the visual pain grading system; Having a moderate disability index score, between 15-30 or 30% to 60% of the adjusted total score Questionnaire related to neck functional disability; Neck pain for which the specialist doctor did not mention a specific cause; People with forward head posture

Intervention groups

They were randomly divided into three groups of 12 people. The first group was neck stabilization exercises, the second group was neck stabilization exercises and thoracic mobility, and the third group was the control group.

Main outcome variables

independent variable: Corrective exercise program to stabilize the neck Thoracic region mobility training program dependent variable: Neck pain, neck range of

motion, neck muscle endurance, neck proprioception, posture

Scientific title

Comparison the effect of neck stabilization exercises with and without thoracic mobility exercises on neck pain, range of motion, muscle endurance, proprioception and posture in women with chronic neck pain and forward head posture

Public title

Comparison the effect of neck stabilization exercises with and without thoracic mobility exercises on neck pain, range of motion, muscle endurance, proprioception and posture in women with chronic neck pain and forward head posture

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Women 25 to 50 years old people with non-specific chronic neck pain obtaining a suitable rating of pain and average disability index people with forward head posture

Exclusion criteria:

Having any history of fracture and surgery in the shoulder joint Craniovertebral angle less than 45 degrees and more than 60 degrees Failure to regularly participate in training programs for two consecutive sessions and three non-consecutive sessions Spine surgery Presence of specific structural damage in the neck

Age

From **25 years** old to **50 years** old

Gender

Female

Health conditions studied**1****Description of health condition studied**

Chronic neck pain and forward head posture

ICD-10 code

M50

ICD-10 code description

Cervical disc disorders

Primary outcomes**1****Description**

Corrective neck stabilizing exercise program with and without thoracic region mobility exercises on neck pain, neck range of motion, neck muscle endurance, neck proprioception, and forward head posture

Timepoint

It was measured before the start and after 8 weeks

Method of measurement

Digital camera to take pictures and measure posture - Neck disability index questionnaire to measure neck disability - Visual pain scale (VAS) to measure pain - Goniometer to measure range of motion - Laser and headband to measure proprioception - Pressure biofeedback tool to measure Endurance of the deep muscles of the neck - 3.600 kg weight for functional endurance of the neck - weight and dumbbells and big ball and foam roll for exercises

Secondary outcomes

1

Description

The amount of head forward - pain - disability - endurance - sense of proprioception

Timepoint

before the start of the intervention and at the end of the intervention (eight weeks)

Method of measurement

Head forward using video camera and Quinoa software - Endurance using pile test - Proprioception using laser pointer - Pain using visual scale of pain and disability using ndi form

Intervention groups

1

Description

Intervention group: 1 Neck stabilizing exercises

Category

Rehabilitation

2

Description

Intervention group:2 Neck stabilization exercises with thoracic mobility

Category

Rehabilitation

3

Description

Control group: 3 control groups only received educational guidance.
