Comparison of the effect of combination Erbium YAG laser and SVF therapy with Erbium YAG laser alone in the treatment of striae

Protocol summary

Study aim

Comparison of the effect of combination Erbium YAG laser and SVF therapy with Erbium YAG laser alone in the treatment of striae

Design

This study is a phase 1 clinical trial with a control group, double-blind, non-random, on 10 patients with striae. In two sessions, 1 month apart, patients in the intervention group are treated with SVF with erbium yag laser. Patients in the control group are treated with physiological serum with erbium yag laser.

Settings and conduct

This project is carried out in the Skin and Stem Cell Research Center of Tehran University of Medical Sciences. The patients studied will be people with striae. The study will be double blind in which without informing the patient and evaluating the data from the intervention groups, patients are treated in the intervention ward with SVF with erbium yag laser and in the control ward with physiological serum treated with erbium yag laser.

Participants/Inclusion and exclusion criteria

Inclusion criteria: diagnosis of striae distension based on the diagnosis of a dermatologist; Patient satisfaction to participate in the study; Age less than 50 years and more than 18 years; Non-inclusion criteria: use of any treatment to eliminate striae in the last three months; Presence of skin lesions and diseases such as skin cancer; wart; Skin infection

Intervention groups

Intervention group: Patients are treated with SVF with erbium YAG laser. Control group: Patients are treated with physiological serum with erbium YAG laser.

Main outcome variables

striae surface; side effects; patient's satisfaction

Scientific title

Comparison of the effect of combination Erbium YAG laser and SVF therapy with Erbium YAG laser alone in the

treatment of striae

Public title
The effect of erbium and SVF laser treatment in the treatment of striae

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Diagnosis of striae distensae based on the diagnosis of a dermatologist Patient satisfaction with the study Age less than 50 years and more than 18 years
Exclusion criteria:
Use any treatment to eliminate striae in the last three months Existence of skin lesions and diseases such as skin cancer wart Skin infection

Age
From **18 years** old to **50 years** old

Gender
Both

Phase
1

Groups that have been masked

- Outcome assessor
- Data analyser

Sample size
Target sample size: **10**

Randomization (investigator's opinion)
Not randomized

Randomization description

Blinding (investigator's opinion)
Double blinded

Blinding description
The assessor and the patient will not be aware of the intervention groups. Therefore, the study will be double blind.

Placebo
