The investigation of oral and intravenous ascorbic acid effectiveness on Erythropoietin-hyporesponsive anemia in hemodialysis patients referred to Gorgan 5th Azar educative & therapeutic center

Protocol summary

2013-07-14, 1392/04/23

Summary

(1) Objective: The study was conducted to investigation of ascorbic acid effectiveness on Erythropoietin-hyporesponsive anemia in hemodialysis patients. (2) Design: randomized controlled trial (RCT). (3) Setting and conduct: seventy five haemodialysis patients were selected from Gorgan 5th Azar educative & therapeutic center via convenience methods. They were randomly allocated into controls (n = 25), oral ascorbic acid (POAA) group (n = 25) and intravenous ascorbic acid (IVAA) group (n = 25). (4): Participants including major eligibility criteria: Inclusion criteria were: at least 6 months history of hemodialysis, more than 6 months treatment duration with rHuEPO, serum ferritin level of 500 ng/mL or more and transferring saturation less than 20%. Exclusion criteria were: History of infection or inflammation within 3 months; C-reactive protein (CRP) level>2 mg/dL; Bleeding or hemolysis within 3 months; Folate level<4 ng/mL; Vitamin B12 level<200 pg/mL; (5) Intervention: Was administered postdialysis (three time weekly) 300mg intravenous vitamin C in IVAA group and orally 500mg vitamin C in POAA group for 8 weeks. (6) Main outcomes variables: Hemoglobin, hematocrit, serum iron, total iron binding capacity (TIBC) and serum oxalate was examined before and following therapy.

Scientific title

The investigation of oral and intravenous ascorbic acid effectiveness on Erythropoietin-hyporesponsive anemia in hemodialysis patients referred to Gorgan 5th Azar educative & therapeutic center

Public title

Oral and intravenous ascorbic acid effectiveness on erythropoietin-hyporesponsive anemia in hemodialysis

patients

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria Age between 18-70 years; At least 6 months history of hemodialysis; Having dossier in hemodialysis center; Three time hemodialysis in week and four hours for each session; duration of rHuEPO treatment ≥ 6 months; serum ferritin level of 500 ng/mL or more, transferrin saturation $<20\%$. Exclusion criteria History of infection or inflammation within 3 months; C-reactive protein (CRP) level >2 mg/dL; Bleeding or hemolysis within 3 months; Folate level <4 ng/mL; Vitamin B12 level <200 pg/mL; simultaneous participation in another study; Pregnant women.

Age
From **17 years** old to **70 years** old

Gender
Both

Phase
3

Groups that have been masked

Health conditions studied

1

Description of health condition studied

anemia

ICD-10 code

D63.8

ICD-10 code description

Anaemia in other chronic diseases classified elsewhere

Primary outcomes

1

Description

Hemoglobin

Timepoint

Before and 8 weeks after intervention

Method of measurement

Blood examination (g/dl)

2

Description

Hematocrit

Timepoint

Before and 8 weeks after intervention

Method of measurement

Blood examination (%)

3

Description

Serum iron

Timepoint

Before and 8 weeks after intervention

Method of measurement

Blood examination (ng/ml)

4

Description

Ferritin

Timepoint

Before and 8 weeks after intervention

Method of measurement

Blood examination (ng/dl)

5

Description

Total iron binding capacity

Timepoint

Before and 8 weeks after intervention

Method of measurement

Blood examination (%)

Secondary outcomes

1

Description

Serum oxalate

Timepoint

Before and 8 weeks after intervention

Method of measurement

Blood examination mg/dl

Intervention groups

1

Description

In intravenous ascorbic acid (IVAA) group, 300mg intravenous vitamin C(three time weekly)for 8 weeks after each dialysis session

Category

Treatment - Drugs

2

Description

In oral ascorbic acid (POAA) group, 500mg vitamin C (three time weekly)for 8 weeks after each dialysis session

Category

Treatment - Drugs
