

Clinical Trial Protocol

Iranian Registry of Clinical Trials

27 Jun 2026

Evaluation of the effect and factors related to olfactory rehabilitation in patients with olfactory dysfunction after COVID-19 infection

Protocol summary

Study aim

Evaluation of the effect of Olfactrain product in olfactory rehabilitation in patients with olfactory dysfunction after Covid-19 infection

Design

A clinical trial with intervention and control groups, with parallel groups, double-blind, randomized, phase 2-3 on 240 patients. Blocks with size of four were used for randomization.

Settings and conduct

The location of the study is the Ear, Throat, and Nose Clinic of Amir Alam Hospital. This clinic is a reference center for studies and treatment of ear, throat, and nose diseases. Blinding was not done in this study. First, patients go to the established specialist and are visited. Then, for all patients, the demographic profile, satisfaction, and smell form are filled by the clinic personnel, then, if needed, a CT scan is performed in order to check their smell problem in detail. At the beginning of the treatment, a smell identification test is performed and their scores are recorded.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Decreased olfactory or olfactory change after Covid-19 infection At least 3 months have passed since the onset of the olfactory disorder. - 18 - age of patients between 60 Exclusion criteria: - History of head trauma or olfactory loss before Covid-19 infection - History of illness, surgery, or brain tumor

Intervention groups

Patients in the intervention group are treated for 3 months with olfactory rehabilitation with the four main scents of rose, eucalyptus, clove, and lemon. Patients in the control group are followed up for three months and after three months of waiting for olfactory rehabilitation.

Main outcome variables

Odor test score

Scientific title

Evaluation of the effect and factors related to olfactory rehabilitation in patients with olfactory dysfunction after COVID-19 infection

Public title

Olfactory rehabilitation by Olfactrain product

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Decreased olfactory (anosmia and hyposmia) or olfactory change (phantom or crocosmia) after Covid 19 infection (infection detection method is recorded in the data entry form) At least 3 months have passed since the onset of olfactory disorder.

Exclusion criteria:

History of head trauma or olfactory loss before Covid-19 infection History of surgery or brain tumor Patient examination or CT scan in patients is beneficial for olfactory conduction disorder History of similar treatments with olfactory training Neurodegenerative diseases that cause olfactory disorders such as Parkinson's and Levy Buddy disease

Age

From **18 years** old to **60 years** old

Gender

Both

Phase

2-3

Groups that have been masked

No information

Sample size

Target sample size: **240**

Randomization (investigator's opinion)

Randomized

Randomization description

The randomization type is blocked randomization. Bloke size 4 of intervention (A) and control (B) groups defined as (AABB, ABAB, ABBA, BBAA, BABA, BAAB) are written on six cards respectively on cards 1-6, then the cards in The envelope are placed. Each time, one of the cards is randomly taken out of the envelope and put together. Finally, a random string is made from the sequence of the selected cards (in the number of the sample size), respectively, patients A and B are entered into the study until the desired sample size is reached.

Blinding (investigator's opinion)

Not blinded

Health conditions studied

1

Description of health condition studied

Loss of sense of smell, olfactory rehabilitation

ICD-10 code

R43.0

ICD-10 code description

Anosmia

Primary outcomes

1

Description

smell test score

Timepoint

Measure the olfactory test at the beginning of the study and 90 days after

Method of measurement

Test of 24 Iranian olfactory test

Secondary outcomes

empty

Intervention groups

1

Description

Patients are randomly divided into two intervention and control groups by using a quadruple block. Patients who are in the intervention group are treated for 3 months with olfactory training with the four main scents of rose, eucalyptus, clove, and lemon. After three months after the beginning of the study, the SIT test and the quality of life are done again and the results are compared with each other.

Category

Treatment - Drugs

2

Description

Control group: Patients in the control group are followed up for three months and after three months they are expected to have olfactory rehabilitation
